There are 0 time periods with multiple data

---

A = 34110
B = 0
C = 13860
D = 0
E = 710
F = 0
a = 242256
b = 994896
c = 4704
Group Variance = 11563.7
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 176.878
M1 = (1176 - 176.878)/2.0 = 499.561
M2 = (1176 + 176.878)/2.0 + 1 = 677.439
Lower limit is 0 = Q(500)
Upper limit is 0 = Q(677)
0 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SME 1

There are 0 time periods with multiple data

---

A = 1362
B = 0
C = 330
D = 0
E = 78
F = 0
a = 242256
b = 994896
c = 4704
Group Variance = 13383
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 190.285
M1 = (1176 - 190.285)/2.0 = 492.858
M2 = (1176 + 190.285)/2.0 + 1 = 684.142
Lower limit is -0.0013125 = Q(493)
Upper limit is 0 = Q(684)
-0.0013125 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SS 13

There are 0 time periods with multiple data

---

A = 21012
B = 0
C = 8166
D = 0
E = 520
F = 0
a = 242256
b = 994896
c = 4704
Group Variance = 12291.3
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 182.359
M1 = (1176 - 182.359)/2.0 = 496.821
M2 = (1176 + 182.359)/2.0 + 1 = 680.179
Lower limit is 0 = Q(497)
Upper limit is 4.16667e-05 = Q(680)
0 < 0 < 4.16667e-05 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SS 14

There are 0 time periods with multiple data

---

A = 228
B = 0
C = 6
D = 0
E = 24
F = 0
a = 242256
b = 994896
c = 4704
Group Variance = 13446
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 190.732
M1 = (1176 - 190.732)/2.0 = 492.634
M2 = (1176 + 190.732)/2.0 + 1 = 684.366
Lower limit is -0.00114634 = Q(493)
Upper limit is 0 = Q(684)
-0.00114634 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate

There are 0 time periods with multiple data

---

A = 34158
B = 0
C = 13866
D = 0
E = 714
F = 0
a = 242256
b = 994896
c = 4704
Group Variance = 11561
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 176.858
M1 = (1176 - 176.858)/2.0 = 499.571
M2 = (1176 + 176.858)/2.0 + 1 = 677.429
Lower limit is 0 = Q(500)
Upper limit is 3.57143e-05 = Q(677)
0 < 0 < 3.57143e-05 indicating no trend in data.

## Sen's Slope Analysis

| 12/11/2024 | 1 |
| 2/18/2025 | 1 |

There are 0 time periods with multiple data

A = 2316
B = 0
C = 726
D = 0
E = 96
F = 0
a = 10608
b = 36720
c = 544
Group Variance = 460.667
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 35.3037
M1 = (136 - 35.3037)/2.0 = 50.3481
M2 = (136 + 35.3037)/2.0 + 1 = 86.6519

Lower limit is -0.00111111 = Q(50)
Upper limit is 0 = Q(87)
-0.00111111 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SME 5
**Original Data (Not Transformed)**

There are 0 time periods with multiple data

A = 3036
B = 0
C = 996
D = 0
E = 116
F = 0
a = 12546
b = 44064
c = 612
Group Variance = 528.333
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 37.8078
M1 = (153 - 37.8078)/2.0 = 57.5961
M2 = (153 + 37.8078)/2.0 + 1 = 96.4039
Lower limit is -0.000833333 = Q(58)
Upper limit is 0 = Q(96)
-0.000833333 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SME 6
**Original Data (Not Transformed)**
**Non-Detects Replaced with Detection Limit**

90% Confidence Level

There are 0 time periods with multiple data

A = 3984
B = 0
C = 1344
D = 0
E = 144
F = 0
a = 12546
b = 44064
c = 612
Group Variance = 475.667
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 35.8739
M1 = (153 - 35.8739)/2.0 = 58.5631
M2 = (153 + 35.8739)/2.0 + 1 = 95.4369
Lower limit is 0 = Q(59)
Upper limit is 0 = Q(95)
0 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SME 7

There are 0 time periods with multiple data

---

A = 18
B = 0
C = 0
D = 0
E = 2
F = 0
a = 12546
b = 44064
c = 612
Group Variance = 696
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 43.3942
M1 = (153 - 43.3942)/2.0 = 54.8029
M2 = (153 + 43.3942)/2.0 + 1 = 99.1971
Lower limit is 0.00244444 = Q(55)
Upper limit is 0.0404 = Q(99)
**0.00244444 > 0 indicating an upward trend in data.**

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SME 10
**Original Data (Not Transformed)**
**Non-Detects Replaced with Detection Limit**

90% Confidence Level

There are 0 time periods with multiple data

---

A = 546
B = 0
C = 120
D = 0
E = 34
F = 0
a = 3828
b = 11880
c = 264
Group Variance = 182.333
For 90% confidence interval (two-tailed), Z at (1-0.9)/2 = 1.64485
C = 22.2106
M1 = (66 - 22.2106)/2.0 = 21.8947
M2 = (66 + 22.2106)/2.0 + 1 = 45.1053
Lower limit is -0.00171429 = Q(22)
Upper limit is 0 = Q(45)
-0.00171429 < 0 < 0 indicating no trend in data.

## Sen's Slope Analysis
### Parameter: Ortho-phosphate
### Location: SME 9

# 1.0 Introduction

S&ME, Inc. has prepared this Quarterly Wet-Weather Monitoring Report on behalf of Etowah County and the cities of Attalla, Glencoe, Hokes Bluff, Rainbow City, and Southside. Our work was conducted in general accordance with the proposals issued to each entity.

## 1.1 NPDES Permit

The Storm Water Phase II Final Rule issued by the United States Environmental Protection Agency (USEPA) in 1999 requires nationwide coverage of all operators of small MS4s located within the boundaries of an "urbanized area" as defined by the latest decennial Census. Based on the results of the 2010 census, the Bureau of the Census designated the City of Attalla, City of Gadsden, City of Glencoe, City of Hokes Bluff, City of Rainbow City, City of Southside, and portions of unincorporated Etowah County as the *Gadsden, Alabama Urbanized Area*. A map outlining the approximate boundary of the *Gadsden, Alabama Urbanized Area* is included as Figure 1 in Appendix I. The regulated small municipal separate storm sewer systems (MS4s) within the urbanized area are collectively referred to as the Gadsden-Etowah MS4.

The Alabama Department of Environmental Management (ADEM) reissued National Pollutant Discharge Elimination System (NPDES) General Permit ALR040000 for discharges from regulated small municipal separate storm sewer systems with an effective date of October 1, 2021. Permit numbers for each entity in the Gadsden-Etowah MS4 are provided in Table 1-1.

**Table 1-1 Permit Numbers and Responsible Officials**

| Entity | Permit Number | Name |
|---|---|---|
| City of Attalla | ALR040052 | Larry Means, Mayor |
| City of Gadsden | ALR040053 | Craig Ford, Mayor |
| City of Glencoe | ALR040054 | Chris Hare, Mayor |
| City of Hokes Bluff | ALR040055 | Scott Reeves, Mayor |
| City of Rainbow City | ALR040056 | Joe Taylor, Mayor |
| City of Southside | ALR040057 | Dana Snyder, Mayor |
| Etowah County | ALR040009 | Robert Nail, Engineer |

## 1.2 Water Quality Concerns

Section 303(d) of the Clean Water Act (CWA), as amended by the Water Quality Act of 1987, and EPA's Water Quality Planning and Management Regulations (40 CFR 130) require states to identify waterbodies not in compliance with the water quality standards applicable to their designated use classifications. Section 303(d) then requires that total maximum daily loads (TMDLs) be determined for all pollutants causing violation of applicable water quality standards in each identified segment.

Neely Henry Lake is the primary receiving water for the Gadsden-Etowah MS4. In 1996, the ADEM identified five of the six reservoirs on the Coosa River within the State of Alabama's borders as being impaired, including Neely Henry Lake. In 2008, the EPA approved TMDLs for Neely Henry Lake related to Nutrients (Total Phosphorus), pH, and Dissolved Oxygen. **The Gadsden-Etowah MS4 is required to achieve a 30% reduction in Total Phosphorus loading.**

### 1.3 Monitoring Program

Part III.B of the NPDES General Permit requires that the Permittee develop and implement a Storm Water Management Program Plan (SWMPP). Part IV.D of the NPDES General Permit requires that the SWMPP include monitoring provisions to document that the waste load allocations prescribed in the TMDL are being achieved.

Each entity's SWMPP requires implementation of the wet-weather monitoring program as detailed in the *Gadsden-Etowah MS4 Wet-Weather Monitoring Program*, dated April 2022 (hereafter referred to as the 2022 Monitoring Program). The intent of the proposed monitoring program is to evaluate the effectiveness of each MS4's BMPs in achieving the required phosphorus reduction as established in the TMDL and to generally evaluate overall water quality using a watershed approach.

On March 24, 2015, the cities of Attalla, Gadsden, Glencoe, Hokes Bluff, Rainbow City, and Southside and Etowah County entered into a Cooperative Agreement to jointly perform the quarterly monitoring. As of October 1, 2023, the City of Gadsden has elected to separate from the joint monitoring agreement and perform their own monitoring. As of the date of this report, the 2022 Monitoring Program has not been revised, nor has the City of Gadsden prepared a separate monitoring plan.

## 2.0 Rainfall Data

The largest loading of phosphorus to the Coosa River from the Gadsden-Etowah MS4 is expected to occur during runoff events; therefore, the 2022 Monitoring Program requires that monitoring be conducted within 72 hours of a qualifying rain event of at least 0.75 inch, as measured at three rain gauges within the MS4 located a minimum of three miles apart.

On May 18, 2024, a rain event was observed in the vicinity of the urbanized area. Table 2-1 lists the observed rain gauges, and the recorded precipitation amounts for the rain event. The locations of the weather stations are identified on Figure 2 in Appendix I.

**Table 2-1 Rainfall Data – May 18, 2024**

| Gauge Name | Location | Latitude | Longitude | Precip 5/18/24 |
|---|---|---|---|---|
| KALASHVI18 | Ashville, AL | 33.88 | -86.11 | 0.35 in |
| KALASHVI19 | Ashville, AL | 33.84 | -86.25 | NR |
| KALATTAL12 | Attalla, AL | 34.09 | -86.12 | 0.08 in |
| KALATTAL22 | Attalla, AL | 33.99 | -86.11 | 0.71 |

| Gauge Name | Location | Latitude | Longitude | Precip 5/18/24 |
|---|---|---|---|---|
| KALGADSD102 | Gadsden, AL | 34.04 | -85.89 | 0.70 in |
| KALGADSD117 | Gadsden, AL | 34.03 | -86.07 | **1.24 in** |
| KALGADSD122 | Gadsden, AL | 33.97 | -85.99 | **0.81 in** |
| KALGADSD3 | Gadsden, AL | 34.06 | -85.99 | NR |
| KALGADSD76 | Gadsden, AL | 33.96 | -85.98 | 0.63 in |
| KALGLENC5 | Glencoe, AL | 33.94 | -85.95 | NR |
| KALGLENC7 | Glencoe, AL | 33.97 | -85.91 | 0.62 in |
| KALHOKES2 | Hokes Bluff, AL | 33.99 | 85.81 | 0.42 in |
| KALHOKES6 | Hokes Bluff, AL | 34.01 | -85.92 | 0.46 in |
| KALRAINB17 | Rainbow City, AL | 33.93 | -86.09 | 0.54 in |
| KALRAINB19 | Rainbow City, AL | 33.94 | -86.03 | **0.74 in** |
| KALSOUTH7 | Southside, AL | 33.89 | -86.01 | 0.38 in |

NR – Not Reporting

Two gauges (KALGADSD117 and KALGADSD122) recorded precipitation totals in excess of the 0.75-inch threshold. Gauge KALRAINB19 recorded a total of 0.74 inch of rain, just below the 0.75-inch threshold. Due to concerns regarding the forecasted lack of rain for the remainder of the second quarter, S&ME decided to perform the monitoring following the May 18, 2024 rain event.

# 3.0 Monitoring Event

On May 20, S&ME personnel mobilized to conduct storm water monitoring for the second quarter of 2024 in general accordance with Section 3 of the *Gadsden-Etowah MS4 Wet-Weather Monitoring Program*, dated April 2022.

## 3.1 Monitoring Locations

The monitoring locations for the six MS4s remaining in the joint monitoring program are identified on Figure 3 in Appendix I. Coordinates for each point are listed in Table 3-1.

### Table 3-1 Monitoring Point Coordinates

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| AT 5 | 34.006446° | -86.069061° | LAND | Big Wills Creek / Little Wills Creek |
| GD 12 | 33.952567° | -86.003495° | LAND | U.T. to Neely Henry Lake |
| RC 2 | 33.967683° | -86.039476° | LAND | Horton Creek |
| SME 10 | 33.985669° | -85.878605° | LAND | U.T. to Big Cove Creek (exiting Hokes Bluff) |

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| SME 7 | 34.006225° | -86.111277° | LAND | Big Wills Creek |
| SME 9 | 34.002807° | -85.871879° | LAND | U.T. to Neely Henry Lake |
| SS 13 | 33.891352° | -86.049229° | LAND | Neely Henry Lake |
| SS 14 | 33.885921° | -86.030683° | LAND | U.T. to Neely Henry Lake |
| GD 5 | 34.014324° | -85.924013° | BOAT | Big Cove Creek / Little Cove Creek |
| HB 3 | 34.002129° | -85.882808° | BOAT | U.T. to Neely Henry Lake |
| RC 14 | 33.905786° | -86.111656° | BOAT | Rook Creek / Dry Creek |
| SME 1 | 33.990184° | -86.004048° | BOAT | Big Wills Creek / Black Creek |
| SME 3 | 34.009698° | -85.956230° | BOAT | Coal Creek |
| SME 4 | 34.001667° | -85.883342° | BOAT | Coosa River channel at north end of MS4 |
| SME 5 | 33.940514° | -86.029885° | BOAT | Coosa River channel at center of MS4 |
| SME 6 | 33.852125° | -86.049695° | BOAT | Confluence of Greens Creek and Coosa River |
| SS 5 | 33.941329° | -86.021569° | BOAT | U.T. to Coosa River |

Following evaluation of the monitoring program for the Annual Reports in May of 2020, monitoring points CO 14, SME 3, and GD 3 were removed from the monitoring program and monitoring points SME 4, SME 5, SME 6, SME 7, and SME 8 were added. The changes to the monitoring program were implemented beginning with the 2020 fourth quarter sampling event. Monitoring point SME 3 was reinstated as part of the monitoring program beginning with the 2021 third quarter sampling event.

Following evaluation of the monitoring program for the 2022 SWMPPs and 2022 Monitoring Program, monitoring points SME 2 and SME 8 were removed from the monitoring program and monitoring points SME 9 and SME 10 were added. The changes to the monitoring program were implemented beginning with the 2022 second quarter sampling event.

**Following the City of Gadsden's separation from the joint monitoring program, S&ME has discontinued monitoring at points CO 15, GD 6, GD 7, GD8, and GD9.** The changes to the monitoring program were implemented beginning with the 2023 fourth quarter sampling event. It is expected that the City of Gadsden will continue to monitor these five locations until the 2022 Monitoring Program is revised.

## 3.2 Sampling Procedures

Samples accessible by land were obtained using a stainless-steel bucket. Samples accessible by boat were obtained using a horizontal Van Dorn sampler. The bucket and Van Dorn sampler were decontaminated prior to use and in between samples.

## 3.3 Field Documentation

The following observations were documented in the field at each monitoring location:

- Monitoring point ID

- Date and time
- Person conducting the sampling
- Equipment used
- Depth of sample collection
- Weather conditions
- Waterbody conditions

The following parameters were measured in the field at the time of sample collection:

- Turbidity
- pH
- Dissolved Oxygen (DO)
- Temperature

Field parameters were measured using a YSI Pro DSS Multi-Probe Meter.

The recorded field observations are included on Table B.1 in Appendix II. The recorded field parameters are included on Table B.2 in Appendix II.

## 3.4 Quality Assurance / Quality Control

The following handling procedures were employed in general accordance with EPA and ADEM guidance to safeguard the quality of the collected samples.

### *3.4.1 Sample Containers and Preservation*

The samples were collected in new laboratory-provided containers containing analyte-appropriate preservatives as listed in Table 3-2.

**Table 3-2 Sample Containers and Preservation**

| Parameter | Container | Preservative | Hold Time |
|---|---|---|---|
| Total Suspended Solids (TSS) | HDPE - 1 L | NONE | 7 days |
| Total Phosphorus | HDPE - 250 mL | $H_2SO_4$ | 48 hours |
| Orthophosphate | AMB - 100 mL | NONE | 48 hours |
| Nitrate-Nitrite | HDPE - 250 mL | $H_2SO_4$ | 28 days |
| Total Kjeldahl Nitrogen (TKN) | HDPE - 250 mL | $H_2SO_4$ | 28 days |

Prior to filling, sample containers were labeled with the following information in waterproof ink:

- Project number
- Sample location
- Collection date and time
- Preservative

- Analysis to be performed

### *3.4.2 Quality Assurance*

Two duplicate samples were submitted to the laboratory. One duplicate sample of monitoring point AT 5 was collected by the land team during the sampling event and labeled as SME 12. One duplicate sample of monitoring point SME 4 was collected by the boat team during the sampling event and labeled as SME 11.

### *3.4.3 Sample Shipment*

After filling, the sample containers were sealed and immediately placed on ice in a protective container for shipment to the analytical laboratory. A Chain of Custody form was completed and accompanied the samples from the field to the laboratory. A copy of the Chain of Custody is included in Appendix III.

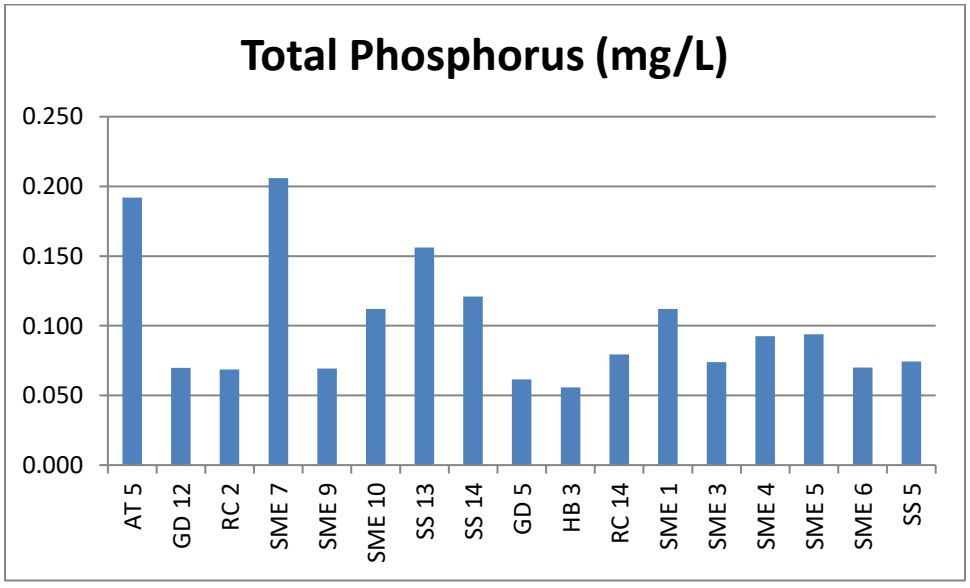
# 4.0 Analytical Results

The laboratory analytical results for the May 18 quarterly monitoring event are included on Table B.2 in Appendix II. Historical monitoring data for each of the active monitoring points is included in Appendix II as Tables B.3 to B.19. The laboratory reports and Chain of Custody are included in Appendix III.

## 4.1 Total Phosphorus

Total phosphorus was detected at all 17 monitoring points evaluated during the 2024 Q2 monitoring event. As shown in Figure 4-1 below, the concentration of total phosphorus was highest at monitoring point SME 7 (0.206 mg/L), followed by point AT 5 (0.192 mg/L) and point SS13 (0.156 mg/L). Two of the three points are located at Big Wills Creek.

**Figure 4-1 2024 Q2 Total Phosphorus Concentrations**



## 5.0 Recordkeeping

Each quarterly monitoring report will be incorporated into the Annual Report submitted by each entity. Monitoring reports will be retained by each entity for a minimum of three years.

The Storm Water Steering Committee is responsible for the coordination and implementation of the 2022 *Gadsden-Etowah Wet-Weather Monitoring Program*. Current membership of the Storm Water Steering Committee is as follows:

**Table 5-1 Storm Water Steering Committee**

| Entity | Contact | Phone No. | Email |
|---|---|---|---|
| City of Gadsden | Heath Williamson | 256-549-4520 | hwilliamson@cityofgadsden.com |
| City of Gadsden | Keener Morrow | 256-549-4524 | kmorrow@cityofgadsden.com |
| City of Attalla | Jason Nicholson | 256-441-9200 | jnicholson@attallacity.org |
| City of Rainbow City | Joel Garmon | 256-413-1230 | jgarmon@rbcalabama.com |

One copy of this Monitoring Report has been provided to each member of the Storm Water Steering Committee.

## 6.0 Certification of the Monitoring Report

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment for knowing violations.

## 7.0 Acknowledgement

S&ME certifies that the information provided in this monitoring report reflects the conditions reported, encountered, and discovered at the time of report preparation. When performing this scope of services, S&ME observed the degree of care and skill generally exercised by other consultants undertaking similar studies at the same time, under similar circumstances and conditions, and in the same geographic area.

## 8.0 Closing

S&ME sincerely appreciates the opportunity to provide watershed monitoring services for the Gadsden-Etowah MS4. Should questions remain or if additional information is required, please do not hesitate to contact the undersigned.

NTU - Nephelometric Turbidity Units
mg/L - milligrams per liter
NS - Not Sampled

Bold - maximum reading for constituent
NA - not availabe at this time
* - value unknown due to equipment malfuction

## TABLE B.3 - HISTORICAL ANALYTICAL DATA - AT 5

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |
| P1 | RPD value not applicable for sample concentrations less than 5 times the reporting limit. |
| V | The sample concentration is too high to evaluate accurate spike recoveries. |

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Mark W. Beasley
Project Manager

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |

# 1.0 Introduction

S&ME, Inc. has prepared this Quarterly Wet-Weather Monitoring Report on behalf of Etowah County and the cities of Attalla, Glencoe, Hokes Bluff, Rainbow City, and Southside. Our work was conducted in general accordance with the proposals issued to each entity.

## 1.1 NPDES Permit

The Storm Water Phase II Final Rule issued by the United States Environmental Protection Agency (USEPA) in 1999 requires nationwide coverage of all operators of small MS4s located within the boundaries of an "urbanized area" as defined by the latest decennial Census. Based on the results of the 2010 census, the Bureau of the Census designated the City of Attalla, City of Gadsden, City of Glencoe, City of Hokes Bluff, City of Rainbow City, City of Southside, and portions of unincorporated Etowah County as the *Gadsden, Alabama Urbanized Area*. A map outlining the approximate boundary of the *Gadsden, Alabama Urbanized Area* is included as Figure 1 in Appendix I. The regulated small municipal separate storm sewer systems (MS4s) within the urbanized area are collectively referred to as the Gadsden-Etowah MS4.

The Alabama Department of Environmental Management (ADEM) reissued National Pollutant Discharge Elimination System (NPDES) General Permit ALR040000 for discharges from regulated small municipal separate storm sewer systems with an effective date of October 1, 2021. Permit numbers for each entity in the Gadsden-Etowah MS4 are provided in Table 1-1.

**Table 1-1 Permit Numbers and Responsible Officials**

| Entity | Permit Number | Name |
|---|---|---|
| City of Attalla | ALR040052 | Larry Means, Mayor |
| City of Gadsden | ALR040053 | Craig Ford, Mayor |
| City of Glencoe | ALR040054 | Chris Hare, Mayor |
| City of Hokes Bluff | ALR040055 | Scott Reeves, Mayor |
| City of Rainbow City | ALR040056 | Joe Taylor, Mayor |
| City of Southside | ALR040057 | Dana Snyder, Mayor |
| Etowah County | ALR040009 | Robert Nail, Engineer |

## 1.2 Water Quality Concerns

Section 303(d) of the Clean Water Act (CWA), as amended by the Water Quality Act of 1987, and EPA's Water Quality Planning and Management Regulations (40 CFR 130) require states to identify waterbodies not in compliance with the water quality standards applicable to their designated use classifications. Section 303(d) then requires that total maximum daily loads (TMDLs) be determined for all pollutants causing violation of applicable water quality standards in each identified segment.

Neely Henry Lake is the primary receiving water for the Gadsden-Etowah MS4. In 1996, the ADEM identified five of the six reservoirs on the Coosa River within the State of Alabama's borders as being impaired, including Neely Henry Lake. In 2008, the EPA approved TMDLs for Neely Henry Lake related to Nutrients (Total Phosphorus), pH, and Dissolved Oxygen. **The Gadsden-Etowah MS4 is required to achieve a 30% reduction in Total Phosphorus loading.**

### 1.3 Monitoring Program

Part III.B of the NPDES General Permit requires that the Permittee develop and implement a Storm Water Management Program Plan (SWMPP). Part IV.D of the NPDES General Permit requires that the SWMPP include monitoring provisions to document that the waste load allocations prescribed in the TMDL are being achieved.

Each entity's SWMPP requires implementation of the wet-weather monitoring program as detailed in the *Gadsden-Etowah MS4 Wet-Weather Monitoring Program*, dated April 2022 (hereafter referred to as the 2022 Monitoring Program). The intent of the proposed monitoring program is to evaluate the effectiveness of each MS4's BMPs in achieving the required phosphorus reduction as established in the TMDL and to generally evaluate overall water quality using a watershed approach.

On March 24, 2015, the cities of Attalla, Gadsden, Glencoe, Hokes Bluff, Rainbow City, and Southside and Etowah County entered into a Cooperative Agreement to jointly perform the quarterly monitoring. As of October 1, 2023, the City of Gadsden has elected to separate from the joint monitoring agreement and perform their own monitoring. As of the date of this report, the 2022 Monitoring Program has not been revised, nor has the City of Gadsden prepared a separate monitoring plan.

## 2.0 Rainfall Data

The largest loading of phosphorus to the Coosa River from the Gadsden-Etowah MS4 is expected to occur during runoff events; therefore, the 2022 Monitoring Program requires that monitoring be conducted within 72 hours of a qualifying rain event of 0.75 inch, as measured at three rain gauges within the MS4 located a minimum of three miles apart.

From September 13 to September 14, 2024, a rain event was observed in the vicinity of the urbanized area. Table 2-1 lists the observed rain gauges, and the recorded precipitation amounts for the rain event. The locations of the weather stations are identified on Figure 2 in Appendix I.

**Table 2-1 Quarterly Rainfall Data**

| Gauge Name | Location | Latitude | Longitude | Precip 9/13/24 | Precip 9/14/24 |

NR – Not Reporting

# 3.0 Monitoring Event

On September 16, 2024, S&ME personnel mobilized to conduct storm water monitoring for the third quarter of 2024 in general accordance with Section 3 of the *Gadsden-Etowah MS4 Wet-Weather Monitoring Program*, dated April 2022.

## 3.1 Monitoring Locations

The monitoring locations for the six MS4s remaining in the joint monitoring program are identified on Figure 3 in Appendix I. Coordinates for each point are listed in Table 3-1.

**Table 3-1 Monitoring Point Coordinates**

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| AT 5 | 34.006446° | -86.069061° | LAND | Big Wills Creek / Little Wills Creek |
| GD 12 | 33.952567° | -86.003495° | LAND | U.T. to Neely Henry Lake |
| RC 2 | 33.967683° | -86.039476° | LAND | Horton Creek |
| SME 10 | 33.985669° | -85.878605° | LAND | U.T. to Big Cove Creek (exiting Hokes Bluff) |
| SME 7 | 34.006225° | -86.111277° | LAND | Big Wills Creek |
| SME 9 | 34.002807° | -85.871879° | LAND | U.T. to Neely Henry Lake |
| SS 13 | 33.891352° | -86.049229° | LAND | Neely Henry Lake |
| SS 14 | 33.885921° | -86.030683° | LAND | U.T. to Neely Henry Lake |

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| GD 5 | 34.014324° | -85.924013° | BOAT | Big Cove Creek / Little Cove Creek |
| HB 3 | 34.002129° | -85.882808° | BOAT | U.T. to Neely Henry Lake |
| RC 14 | 33.905786° | -86.111656° | BOAT | Rook Creek / Dry Creek |
| SME 1 | 33.990184° | -86.004048° | BOAT | Big Wills Creek / Black Creek |
| SME 3 | 34.009698° | -85.956230° | BOAT | Coal Creek |
| SME 4 | 34.001667° | -85.883342° | BOAT | Coosa River channel at north end of MS4 |
| SME 5 | 33.940514° | -86.029885° | BOAT | Coosa River channel at center of MS4 |
| SME 6 | 33.852125° | -86.049695° | BOAT | Confluence of Greens Creek and Coosa River |
| SS 5 | 33.941329° | -86.021569° | BOAT | U.T. to Coosa River |

Following evaluation of the monitoring program for the Annual Reports in May of 2020, monitoring points CO 14, SME 3, and GD 3 were removed from the monitoring program and monitoring points SME 4, SME 5, SME 6, SME 7, and SME 8 were added. The changes to the monitoring program were implemented beginning with the 2020 fourth quarter sampling event. Monitoring point SME 3 was reinstated as part of the monitoring program beginning with the 2021 third quarter sampling event.

Following evaluation of the monitoring program for the 2022 SWMPPs and 2022 Monitoring Program, monitoring points SME 2 and SME 8 were removed from the monitoring program and monitoring points SME 9 and SME 10 were added. The changes to the monitoring program were implemented beginning with the 2022 second quarter sampling event.

**Following the City of Gadsden's separation from the joint monitoring program, S&ME has discontinued monitoring at points CO 15, GD 6, GD 7, GD8, and GD9.** The changes to the monitoring program were implemented beginning with the 2023 fourth quarter sampling event. It is expected that the City of Gadsden will continue to monitor these five locations until the 2022 Monitoring Program is revised.

## 3.2 Sampling Procedures

Samples accessible by land were obtained using a stainless-steel bucket. Samples accessible by boat were obtained using a horizontal Van Dorn sampler. The bucket and Van Dorn sampler were decontaminated prior to use and in between samples.

## 3.3 Field Documentation

The following observations were documented in the field at each monitoring location:

- Monitoring point ID
- Date and time
- Person conducting the sampling
- Equipment used
- Depth of sample collection

- Weather conditions
- Waterbody conditions

The following parameters were measured in the field at the time of sample collection:

- Turbidity
- pH
- Dissolved Oxygen (DO)
- Temperature

Field parameters were measured using a YSI Pro DSS Multi-Probe Meter.

The recorded field observations are included on Table B.1 in Appendix II. The recorded field parameters are included on Table B.2 in Appendix II.

## 3.4 Quality Assurance / Quality Control

The following handling procedures were employed in general accordance with EPA and ADEM guidance to safeguard the quality of the collected samples.

### *3.4.1 Sample Containers and Preservation*

The samples were collected in new laboratory-provided containers containing analyte-appropriate preservatives as listed in Table 3-2.

**Table 3-2 Sample Containers and Preservation**

| Parameter | Container | Preservative | Hold Time |
|---|---|---|---|
| Total Suspended Solids (TSS) | HDPE - 1 L | NONE | 7 days |
| Total Phosphorus | HDPE - 250 mL | $H_2SO_4$ | 48 hours |
| Orthophosphate | AMB - 100 mL | NONE | 48 hours |
| Nitrate-Nitrite | HDPE - 250 mL | $H_2SO_4$ | 28 days |
| Total Kjeldahl Nitrogen (TKN) | HDPE - 250 mL | $H_2SO_4$ | 28 days |

Prior to filling, sample containers were labeled with the following information in waterproof ink:

- Project number
- Sample location
- Collection date and time
- Preservative
- Analysis to be performed

### *3.4.2 Quality Assurance*

Two duplicate samples were submitted to the laboratory. One duplicate sample of monitoring point AT 5 was collected by the land team during the sampling event and labeled as SME 12. One duplicate sample of monitoring point SME 4 was collected by the boat team during the sampling event and labeled as SME 11.

### *3.4.3 Sample Shipment*

After filling, the sample containers were sealed and immediately placed on ice in a protective container for shipment to the analytical laboratory. A Chain of Custody form was completed and accompanied the samples from the field to the laboratory. A copy of the Chain of Custody is included in Appendix III.

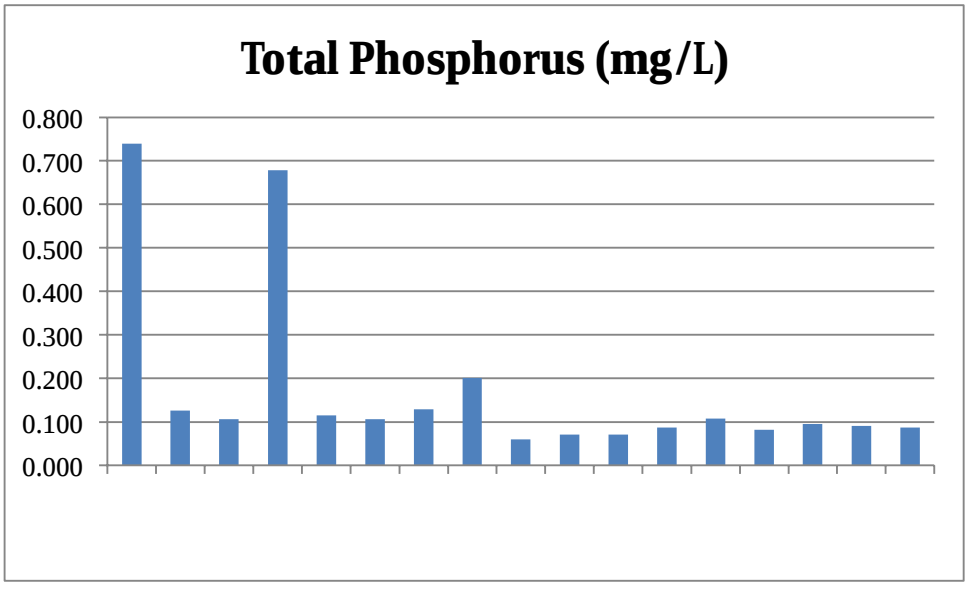
# 4.0 Analytical Results

The laboratory analytical results for the September 16 quarterly monitoring event are included on Table B.2 in Appendix II. Historical monitoring data for each of the active monitoring points is included in Appendix II as Tables B.3 to B.19. The laboratory reports and Chain of Custody are included in Appendix III.

## 4.1 Total Phosphorus

Total phosphorus was detected at the 17 monitoring points evaluated during the 2024 Q3 monitoring event. As shown in Figure 4-1 below, the concentration of total phosphorus was highest at monitoring point AT 5 (0.740 mg/L), followed by point SME 7 (0.678 mg/L) and point SS14 (0.201 mg/L). One of the three points is located at Big Wills Creek.

**Figure 4-1 2024 Q3 Total Phosphorus Concentrations**



## 5.0 Recordkeeping

Each quarterly monitoring report will be incorporated into the Annual Report submitted by each entity. Monitoring reports will be retained by each entity for a minimum of three years.

The Storm Water Steering Committee is responsible for the coordination and implementation of the 2022 *Gadsden-Etowah Wet-Weather Monitoring Program*. Current membership of the Storm Water Steering Committee is as follows:

**Table 5-1 Storm Water Steering Committee**

| Entity | Contact | Phone No. | Email |
|---|---|---|---|
| City of Gadsden | Heath Williamson | 256-549-4520 | hwilliamson@cityofgadsden.com |
| City of Gadsden | Keener Morrow | 256-549-4524 | kmorrow@cityofgadsden.com |
| City of Attalla | Jason Nicholson | 256-441-9200 | jnicholson@attallacity.org |
| City of Rainbow City | Joel Garmon | 256-413-1230 | jgarmon@rbcalabama.com |
| City of Southside | Judd Rich | 256-442-9775 Ext. 103 | juddrich@cityofsouthside.com |
| City of Glencoe | Todd Means | 256-492-1424 | toddmeans@cityofglencoe.org |

| Etowah County | Robert Nail | 256-549-5358 | rnail@etowahcounty.org |

One copy of this Monitoring Report has been provided to each member of the Storm Water Steering Committee.

## 6.0 Certification of the Monitoring Report

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment for knowing violations.

## 7.0 Acknowledgement

S&ME certifies that the information provided in this monitoring report reflects the conditions reported, encountered, and discovered at the time of report preparation. When performing this scope of services, S&ME observed the degree of care and skill generally exercised by other consultants undertaking similar studies at the same time, under similar circumstances and conditions, and in the same geographic area.

## 8.0 Closing

S&ME sincerely appreciates the opportunity to provide watershed monitoring services for the Gadsden-Etowah MS4. Should questions remain or if additional information is required, please do not hesitate to contact the undersigned.

Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |
| P1 | RPD value not applicable for sample concentrations less than 5 times the reporting limit. |

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Craig Cothron
Project Manager

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |
| P1 | RPD value not applicable for sample concentrations less than 5 times the reporting limit. |

# 1.0 Introduction

S&ME, Inc. has prepared this Quarterly Wet-Weather Monitoring Report on behalf of Etowah County and the cities of Attalla, Glencoe, Hokes Bluff, Rainbow City, and Southside. Our work was conducted in general accordance with the proposals issued to each entity.

## 1.1 NPDES Permit

The Storm Water Phase II Final Rule issued by the United States Environmental Protection Agency (USEPA) in 1999 requires nationwide coverage of all operators of small MS4s located within the boundaries of an "urbanized area" as defined by the latest decennial Census. Based on the results of the 2010 census, the Bureau of the Census designated the City of Attalla, City of Gadsden, City of Glencoe, City of Hokes Bluff, City of Rainbow City, City of Southside, and portions of unincorporated Etowah County as the *Gadsden, Alabama Urbanized Area*. A map outlining the approximate boundary of the *Gadsden, Alabama Urbanized Area* is included as Figure 1 in Appendix I. The regulated small municipal separate storm sewer systems (MS4s) within the urbanized area are collectively referred to as the Gadsden-Etowah MS4.

The Alabama Department of Environmental Management (ADEM) reissued National Pollutant Discharge Elimination System (NPDES) General Permit ALR040000 for discharges from regulated small municipal separate storm sewer systems with an effective date of October 1, 2021. Permit numbers for each entity in the Gadsden-Etowah MS4 are provided in Table 1-1.

**Table 1-1 Permit Numbers and Responsible Officials**

| Entity | Permit Number | Name |
|---|---|---|
| City of Attalla | ALR040052 | Larry Means, Mayor |
| City of Gadsden | ALR040053 | Craig Ford, Mayor |
| City of Glencoe | ALR040054 | Chris Hare, Mayor |
| City of Hokes Bluff | ALR040055 | Scott Reeves, Mayor |
| City of Rainbow City | ALR040056 | Joe Taylor, Mayor |
| City of Southside | ALR040057 | Dana Snyder, Mayor |
| Etowah County | ALR040009 | Robert Nail, Engineer |

## 1.2 Water Quality Concerns

Section 303(d) of the Clean Water Act (CWA), as amended by the Water Quality Act of 1987, and EPA's Water Quality Planning and Management Regulations (40 CFR 130) require states to identify waterbodies not in compliance with the water quality standards applicable to their designated use classifications. Section 303(d) then requires that total maximum daily loads (TMDLs) be determined for all pollutants causing violation of applicable water quality standards in each identified segment.

Neely Henry Lake is the primary receiving water for the Gadsden-Etowah MS4. In 1996, the ADEM identified five of the six reservoirs on the Coosa River within the State of Alabama's borders as being impaired, including Neely Henry Lake. In 2008, the EPA approved TMDLs for Neely Henry Lake related to Nutrients (Total Phosphorus), pH, and Dissolved Oxygen. **The Gadsden-Etowah MS4 is required to achieve a 30% reduction in Total Phosphorus loading.**

### 1.3 Monitoring Program

Part III.B of the NPDES General Permit requires that the Permittee develop and implement a Storm Water Management Program Plan (SWMPP). Part IV.D of the NPDES General Permit requires that the SWMPP include monitoring provisions to document that the waste load allocations prescribed in the TMDL are being achieved.

Each entity's SWMPP requires implementation of the wet-weather monitoring program as detailed in the *Gadsden-Etowah MS4 Wet-Weather Monitoring Program*, dated April 2022 (hereafter referred to as the 2022 Monitoring Program). The intent of the proposed monitoring program is to evaluate the effectiveness of each MS4's BMPs in achieving the required phosphorus reduction as established in the TMDL and to generally evaluate overall water quality using a watershed approach.

On March 24, 2015, the cities of Attalla, Gadsden, Glencoe, Hokes Bluff, Rainbow City, and Southside and Etowah County entered into a Cooperative Agreement to jointly perform the quarterly monitoring. As of October 1, 2023, the City of Gadsden has elected to separate from the joint monitoring agreement and perform their own monitoring. As of the date of this report, the 2022 Monitoring Program has not been revised, nor has the City of Gadsden prepared a separate monitoring plan.

## 2.0 Rainfall Data

The largest loading of phosphorus to the Coosa River from the Gadsden-Etowah MS4 is expected to occur during runoff events; therefore, the 2022 Monitoring Program requires that monitoring be conducted within 72 hours of a qualifying rain event of 0.75 inch, as measured at three rain gauges within the MS4 located a minimum of three miles apart.

From December 8 to December 10, 2024, a rain event was observed in the vicinity of the urbanized area. Table 2-1 lists the observed rain gauges, and the recorded precipitation amounts for the rain event. The locations of the weather stations are identified on Figure 2 in Appendix I.

**Table 2-1 Rainfall Data**

| Gauge Name | Location | Latitude | Longitude | Precip 12/8/24 (inches) | Precip 12/9/24 (inches) | Precip 12/10/24 (inches) | Event Total (inches) |

NR – Not Reporting

# 3.0 Monitoring Event

On December 11, 2024, S&ME personnel mobilized to conduct storm water monitoring for the fourth quarter of 2024 in general accordance with Section 3 of the *Gadsden-Etowah MS4 Wet-Weather Monitoring Program*, dated April 2022.

## 3.1 Monitoring Locations

The monitoring locations for the six MS4s remaining in the joint monitoring program are identified on Figure 3 in Appendix I. Coordinates for each point are listed in Table 3-1.

### Table 3-1 Monitoring Point Coordinates

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| AT 5 | 34.006446° | -86.069061° | LAND | Big Wills Creek / Little Wills Creek |
| GD 12 | 33.952567° | -86.003495° | LAND | U.T. to Neely Henry Lake |
| RC 2 | 33.967683° | -86.039476° | LAND | Horton Creek |
| SME 10 | 33.985669° | -85.878605° | LAND | U.T. to Big Cove Creek (exiting Hokes Bluff) |
| SME 7 | 34.006225° | -86.111277° | LAND | Big Wills Creek |
| SME 9 | 34.002807° | -85.871879° | LAND | U.T. to Neely Henry Lake |
| SS 13 | 33.891352° | -86.049229° | LAND | Neely Henry Lake |

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| SS 14 | 33.885921° | -86.030683° | LAND | U.T. to Neely Henry Lake |
| GD 5 | 34.014324° | -85.924013° | BOAT | Big Cove Creek / Little Cove Creek |
| HB 3 | 34.002129° | -85.882808° | BOAT | U.T. to Neely Henry Lake |
| RC 14 | 33.905786° | -86.111656° | BOAT | Rook Creek / Dry Creek |
| SME 1 | 33.990184° | -86.004048° | BOAT | Big Wills Creek / Black Creek |
| SME 3 | 34.009698° | -85.956230° | BOAT | Coal Creek |
| SME 4 | 34.001667° | -85.883342° | BOAT | Coosa River channel at north end of MS4 |
| SME 5 | 33.940514° | -86.029885° | BOAT | Coosa River channel at center of MS4 |
| SME 6 | 33.852125° | -86.049695° | BOAT | Confluence of Greens Creek and Coosa River |
| SS 5 | 33.941329° | -86.021569° | BOAT | U.T. to Coosa River |

Following evaluation of the monitoring program for the Annual Reports in May of 2020, monitoring points CO 14, SME 3, and GD 3 were removed from the monitoring program and monitoring points SME 4, SME 5, SME 6, SME 7, and SME 8 were added. The changes to the monitoring program were implemented beginning with the 2020 fourth quarter sampling event. Monitoring point SME 3 was reinstated as part of the monitoring program beginning with the 2021 third quarter sampling event.

Following evaluation of the monitoring program for the 2022 SWMPPs and 2022 Monitoring Program, monitoring points SME 2 and SME 8 were removed from the monitoring program and monitoring points SME 9 and SME 10 were added. The changes to the monitoring program were implemented beginning with the 2022 second quarter sampling event.

**Following the City of Gadsden's separation from the joint monitoring program, S&ME has discontinued monitoring at points CO 15, GD 6, GD 7, GD8, and GD9.** The changes to the monitoring program were implemented beginning with the 2023 fourth quarter sampling event. It is expected that the City of Gadsden will continue to monitor these five locations until the 2022 Monitoring Program is revised.

## 3.2 Sampling Procedures

Samples accessible by land were obtained using a stainless-steel bucket. Samples accessible by boat were obtained using a horizontal Van Dorn sampler. The bucket and Van Dorn sampler were decontaminated prior to use and in between samples.

## 3.3 Field Documentation

The following observations were documented in the field at each monitoring location:

- Monitoring point ID
- Date and time
- Person conducting the sampling
- Equipment used

- Depth of sample collection
- Weather conditions
- Waterbody conditions

The following parameters were measured in the field at the time of sample collection:

- Turbidity
- pH
- Dissolved Oxygen (DO)
- Temperature

Field parameters were measured using a YSI Pro DSS Multi-Probe Meter.

The recorded field observations are included on Table B.1 in Appendix II. The recorded field parameters are included on Table B.2 in Appendix II.

## 3.4 Quality Assurance / Quality Control

The following handling procedures were employed in general accordance with EPA and ADEM guidance to safeguard the quality of the collected samples.

### *3.4.1 Sample Containers and Preservation*

The samples were collected in new laboratory-provided containers containing analyte-appropriate preservatives as listed in Table 3-2.

**Table 3-2 Sample Containers and Preservation**

| Parameter | Container | Preservative | Hold Time |
|---|---|---|---|
| Total Suspended Solids (TSS) | HDPE - 1 L | NONE | 7 days |
| Total Phosphorus | HDPE - 250 mL | $H_2SO_4$ | 48 hours |
| Orthophosphate | AMB - 100 mL | NONE | 48 hours |
| Nitrate-Nitrite | HDPE - 250 mL | $H_2SO_4$ | 28 days |
| Total Kjeldahl Nitrogen (TKN) | HDPE - 250 mL | $H_2SO_4$ | 28 days |

Prior to filling, sample containers were labeled with the following information in waterproof ink:

- Project number
- Sample location
- Collection date and time
- Preservative
- Analysis to be performed

### *3.4.2 Quality Assurance*

One duplicate sample was submitted to the laboratory. One duplicate sample of monitoring point SME 4 was collected by the boat team during the sampling event and labeled as Duplicate 2.

### *3.4.3 Sample Shipment*

After filling, the sample containers were sealed and immediately placed on ice in a protective container for shipment to the analytical laboratory. A Chain of Custody form was completed and accompanied the samples from the field to the laboratory. A copy of the Chain of Custody is included in Appendix III.

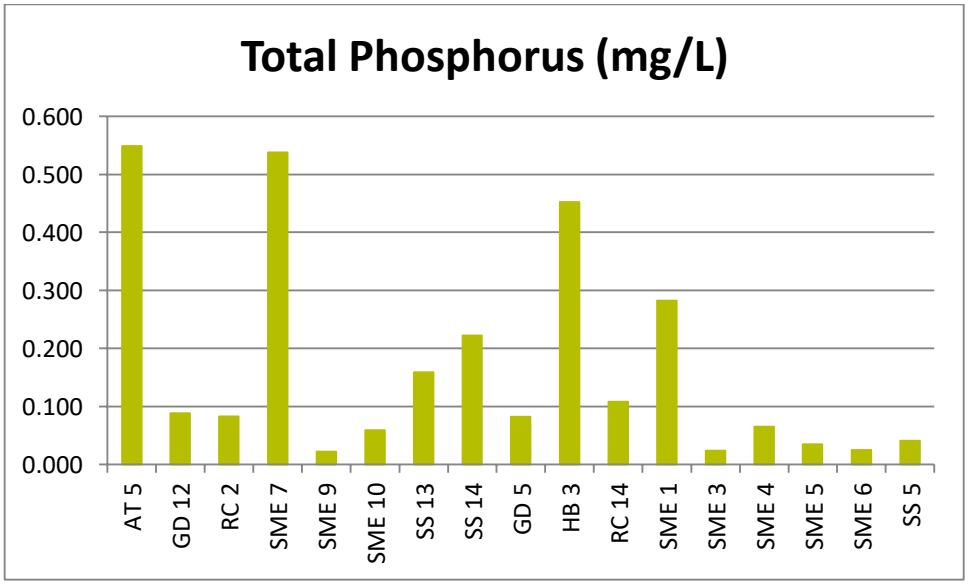
# 4.0 Analytical Results

The laboratory analytical results for the December 11, 2024 quarterly monitoring event are included on Table B.2 in Appendix II. Historical monitoring data for each of the active monitoring points is included in Appendix II as Tables B.3 to B.19. The laboratory reports and Chain of Custody are included in Appendix III.

## 4.1 Total Phosphorus

Total phosphorus was detected at the 17 monitoring points evaluated during the 2024 Q4 monitoring event. As shown in Figure 4-1 below, the concentration of total phosphorus was highest at monitoring point AT 5 (0.549 mg/L), followed by point SME 7 (0.538 mg/L) and point HB 3 (0.452 mg/L). Two of the three points are located at Big Wills Creek.

**Figure 4-1 2024 Q4 Total Phosphorus Concentrations**



## 5.0 Recordkeeping

Each quarterly monitoring report will be incorporated into the Annual Report submitted by each entity. Monitoring reports will be retained by each entity for a minimum of three years.

The Storm Water Steering Committee is responsible for the coordination and implementation of the 2022 *Gadsden-Etowah Wet-Weather Monitoring Program*. Current membership of the Storm Water Steering Committee is as follows:

**Table 5-1 Storm Water Steering Committee**

| Entity | Contact | Phone No. | Email |
|---|---|---|---|
| City of Attalla | Jason Nicholson | 256-441-9200 | jnicholson@attallacity.org |
| City of Gadsden | Heath Williamson | 256-549-4520 | hwilliamson@cityofgadsden.com |
| City of Gadsden | Keener Morrow | 256-549-4524 | kmorrow@cityofgadsden.com |
| City of Glencoe | Todd Means | 256-492-1424 | toddmeans@cityofglencoe.org |
| City of Hokes Bluff | Lisa Lowman | 256-492-2414 | lisa.lowman@cityofhokesbluff.com |
| City of Rainbow City | Joel Garmon | 256-413-1230 | jgarmon@rbcalabama.com |
| City of Southside | Judd Rich | 256-442-9775 Ext. 103 | juddrich@cityofsouthside.com |
| Etowah County | Robert Nail | 256-549-5358 | rnail@etowahcounty.org |

One copy of this Monitoring Report has been provided to each member of the Storm Water Steering Committee.

## 6.0 Certification of the Monitoring Report

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment for knowing violations.

## 7.0 Acknowledgement

S&ME certifies that the information provided in this monitoring report reflects the conditions reported, encountered, and discovered at the time of report preparation. When performing this scope of services, S&ME observed the degree of care and skill generally exercised by other consultants undertaking similar studies at the same time, under similar circumstances and conditions, and in the same geographic area.

## 8.0 Closing

S&ME sincerely appreciates the opportunity to provide watershed monitoring services for the Gadsden-Etowah MS4. Should questions remain or if additional information is required, please do not hesitate to contact the undersigned.

Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Craig Cothron
Project Manager

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| E | The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL). |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| P1 | RPD value not applicable for sample concentrations less than 5 times the reporting limit. |

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Craig Cothron
Project Manager

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| E | The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL). |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |
| P1 | RPD value not applicable for sample concentrations less than 5 times the reporting limit. |

# 1.0 Introduction

S&ME, Inc. has prepared this Quarterly Wet-Weather Monitoring Report on behalf of Etowah County and the cities of Attalla, Glencoe, Hokes Bluff, Rainbow City, and Southside. Our work was conducted in general accordance with the proposals issued to each entity.

## 1.1 NPDES Permit

The Storm Water Phase II Final Rule issued by the United States Environmental Protection Agency (USEPA) in 1999 requires nationwide coverage of all operators of small MS4s located within the boundaries of an "urbanized area" as defined by the latest decennial Census. Based on the results of the 2010 census, the Bureau of the Census designated the City of Attalla, City of Gadsden, City of Glencoe, City of Hokes Bluff, City of Rainbow City, City of Southside, and portions of unincorporated Etowah County as the *Gadsden, Alabama Urbanized Area*. A map outlining the approximate boundary of the *Gadsden, Alabama Urbanized Area* is included as Figure 1 in Appendix I. The regulated small municipal separate storm sewer systems (MS4s) within the urbanized area are collectively referred to as the Gadsden-Etowah MS4s.

The Alabama Department of Environmental Management (ADEM) reissued National Pollutant Discharge Elimination System (NPDES) General Permit ALR040000 for discharges from regulated small municipal separate storm sewer systems with an effective date of October 1, 2021. Permit numbers for each entity are provided in Table 1-1.

**Table 1-1 Permit Numbers and Responsible Officials**

| Entity | Permit Number | Name |
|---|---|---|
| City of Attalla | ALR040052 | Larry Means, Mayor |
| City of Gadsden | ALR040053 | Craig Ford, Mayor |
| City of Glencoe | ALR040054 | Chris Hare, Mayor |
| City of Hokes Bluff | ALR040055 | Scott Reeves, Mayor |
| City of Rainbow City | ALR040056 | Joe Taylor, Mayor |
| City of Southside | ALR040057 | Dana Snyder, Mayor |
| Etowah County | ALR040009 | Robert Nail, Engineer |

## 1.2 Water Quality Concerns

Section 303(d) of the Clean Water Act (CWA), as amended by the Water Quality Act of 1987, and EPA's Water Quality Planning and Management Regulations (40 CFR 130) require states to identify waterbodies not in compliance with the water quality standards applicable to their designated use classifications. Section 303(d) then requires that total maximum daily loads (TMDLs) be determined for all pollutants causing violation of applicable water quality standards in each identified segment.

Neely Henry Lake is the primary receiving water for the Gadsden-Etowah MS4. In 1996, the ADEM identified five of the six reservoirs on the Coosa River within the State of Alabama's borders as being impaired, including Neely Henry Lake. In 2008, the EPA approved TMDLs for Neely Henry Lake related to Nutrients (Total Phosphorus), pH, and Dissolved Oxygen. **The Gadsden-Etowah MS4s are required to achieve a 30% reduction in Total Phosphorus loading.**

In 2018, ADEM identified Big Wills Creek as being impaired. Big Wills Creek is a receiving water for portions of the Attalla MS4 and the Etowah County MS4. In 2024, the EPA approved TMDLs for Big Wills Creek related to pathogens (E. coli). **The Attalla MS4, Gadsden MS4, and the Etowah County MS4 are required to achieve a 96% reduction in E. coli loading.**

### 1.3 Monitoring Program

Part III.B of the NPDES General Permit requires that the Permittee develop and implement a Storm Water Management Program Plan (SWMPP). Part IV.D of the NPDES General Permit requires that the SWMPP include monitoring provisions to document that the waste load allocations prescribed in the TMDL are being achieved.

Each entity's SWMPP requires implementation of the wet-weather monitoring program as detailed in the *Etowah Monitoring Partnership Wet-Weather Monitoring Program*, February 2025 (hereafter referred to as the 2025 Monitoring Program). The 2025 Monitoring Program was prepared to reflect the addition of the 2024 pathogens TMDL. The intent of the monitoring program is to evaluate the effectiveness of each MS4's BMPs in achieving the required reductions established in the applicable TMDLs and to generally evaluate overall water quality using a watershed approach.

On March 24, 2015, the cities of Attalla, Gadsden, Glencoe, Hokes Bluff, Rainbow City, and Southside and Etowah County entered into a Cooperative Agreement to jointly perform the quarterly monitoring. As of October 1, 2023, the City of Gadsden has elected to separate from the joint monitoring agreement and perform their own monitoring.

## 2.0 Rainfall Data

The largest loading of phosphorus to the Coosa River from the Gadsden-Etowah MS4s is expected to occur during runoff events; therefore, the 2022 Monitoring Program requires that monitoring be conducted within 72 hours of a qualifying rain event of 0.75 inch, as measured at three rain gauges within the MS4 located a minimum of three miles apart.

From February 15, 2025 to February 16, 2025, a rain event was observed in the vicinity of the urbanized area. Table 2-1 lists the observed rain gauges, and the recorded precipitation amounts for the rain event. The locations of the weather stations are identified on Figure 2 in Appendix I.

### Table 2-1 Rainfall Data

| Gauge Name | Location | Latitude | Longitude | Precip 2/15/25 (inches) | Precip 2/16/25 (inches) | Event Total (inches) |

NR – Not Reporting

# 3.0 Monitoring Event

On February 18, 2025, S&ME personnel mobilized to conduct storm water monitoring for the first quarter of 2025 in general accordance with Section 3 of the *Etowah Monitoring Partnership Wet-Weather Monitoring Program*, dated February 2025.

## 3.1 Monitoring Locations

The monitoring locations for the six MS4s remaining in the joint monitoring program are identified on Figure 3 in Appendix I. Coordinates for each point are listed in Table 3-1.

### Table 3-1 Monitoring Point Coordinates

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| AT 5 | 34.006446° | -86.069061° | LAND | Big Wills Creek / Little Wills Creek |
| GD 12 | 33.952567° | -86.003495° | LAND | U.T. to Neely Henry Lake |

| Outfall ID | Latitude | Longitude | Access | Waterbody Evaluated |
|---|---|---|---|---|
| RC 2 | 33.967683° | -86.039476° | LAND | Horton Creek |
| SME 10 | 33.985669° | -85.878605° | LAND | U.T. to Big Cove Creek (exiting Hokes Bluff) |
| SME 7 | 34.006225° | -86.111277° | LAND | Big Wills Creek |
| SME 9 | 34.002807° | -85.871879° | LAND | U.T. to Neely Henry Lake |
| SS 13 | 33.891352° | -86.049229° | LAND | Neely Henry Lake |
| SS 14 | 33.885921° | -86.030683° | LAND | U.T. to Neely Henry Lake |
| GD 5 | 34.014324° | -85.924013° | BOAT | Big Cove Creek / Little Cove Creek |
| HB 3 | 34.002129° | -85.882808° | BOAT | U.T. to Neely Henry Lake |
| RC 14 | 33.905786° | -86.111656° | BOAT | Rook Creek / Dry Creek |
| SME 1 | 33.990184° | -86.004048° | BOAT | Big Wills Creek / Black Creek |
| SME 3 | 34.009698° | -85.956230° | BOAT | Coal Creek |
| SME 4 | 34.001667° | -85.883342° | BOAT | Coosa River channel at north end of MS4 |
| SME 5 | 33.940514° | -86.029885° | BOAT | Coosa River channel at center of MS4 |
| SME 6 | 33.852125° | -86.049695° | BOAT | Confluence of Greens Creek and Coosa River |
| SS 5 | 33.941329° | -86.021569° | BOAT | U.T. to Coosa River |

Following evaluation of the monitoring program for the Annual Reports in May of 2020, monitoring points CO 14, SME 3, and GD 3 were removed from the monitoring program and monitoring points SME 4, SME 5, SME 6, SME 7, and SME 8 were added. The changes to the monitoring program were implemented beginning with the 2020 fourth quarter sampling event. Monitoring point SME 3 was reinstated as part of the monitoring program beginning with the 2021 third quarter sampling event.

Following evaluation of the monitoring program for the 2022 SWMPPs and 2022 Monitoring Program, monitoring points SME 2 and SME 8 were removed from the monitoring program and monitoring points SME 9 and SME 10 were added. The changes to the monitoring program were implemented beginning with the 2022 second quarter sampling event.

**Following the City of Gadsden's separation from the joint monitoring program, S&ME has discontinued monitoring at points CO 15, GD 6, GD 7, GD8, and GD9.** The changes to the monitoring program were implemented beginning with the 2023 fourth quarter sampling event and incorporated into the revised 2025 Monitoring Program. It is expected that the City of Gadsden will continue to monitor these five locations.

## 3.2 Sampling Procedures

Samples accessible by land were obtained using a stainless-steel bucket. Samples accessible by boat were obtained using a horizontal Van Dorn sampler. The bucket and Van Dorn sampler were decontaminated prior to use and in between samples.

## 3.3 Field Documentation

The following observations were documented in the field at each monitoring location:

- Monitoring point ID
- Date and time
- Person conducting the sampling
- Equipment used
- Depth of sample collection
- Weather conditions
- Waterbody conditions

The following parameters were measured in the field using a YSI Pro DSS Multi-Probe Meter:

- Turbidity
- pH
- Dissolved Oxygen (DO)
- Temperature (land samples only)

Field parameters for the land samples were measured at the time of sample collection. Field parameters for the boat samples were measured after completion of the sampling event. Due to the delay in measurement, temperature was not recorded for the boat samples.

The recorded field observations are included in Table B.1 in Appendix II. The recorded field parameters are included in Table B.2 in Appendix II.

## 3.4 Quality Assurance / Quality Control

The following handling procedures were employed in general accordance with EPA and ADEM guidance to safeguard the quality of the collected samples.

### *3.4.1 Sample Containers and Preservation*

The samples were collected in new laboratory-provided containers containing analyte-appropriate preservatives as listed in Table 3-2.

**Table 3-2 Sample Containers and Preservation**

| Parameter | Container | Preservative | Hold Time |
|---|---|---|---|
| Total Suspended Solids (TSS) | HDPE - 1 L | NONE | 7 days |
| Total Phosphorus | HDPE - 250 mL | $H_2SO_4$ | 48 hours |
| Orthophosphate | AMB - 100 mL | NONE | 48 hours |
| Nitrate-Nitrite | HDPE - 250 mL | $H_2SO_4$ | 28 days |
| Total Kjeldahl Nitrogen (TKN) | HDPE - 250 mL | $H_2SO_4$ | 28 days |

| Parameter | Container | Preservative | Hold Time |
|---|---|---|---|
| Escherichia Coli (E. Coli) | HDPE – 100 mL | Tablet | 8 hours |

Prior to filling, sample containers were labeled with the following information in waterproof ink:

- Project number
- Sample location
- Collection date and time

### *3.4.2 Quality Assurance*

Two duplicate samples were submitted to the laboratory. One duplicate sample of monitoring point SME 4 was collected by the boat team during the sampling event and labeled as Duplicate 1. One duplicate sample of monitoring point SME 7 was collected by the land team during the sampling event and labeled as SME 12.

### *3.4.3 Sample Shipment*

After filling, the sample containers were sealed and immediately placed on ice in a protective container for shipment to the analytical laboratory. A Chain of Custody form was completed and accompanied the samples from the field to the laboratory. A copy of the Chain of Custody is included in Appendix III.

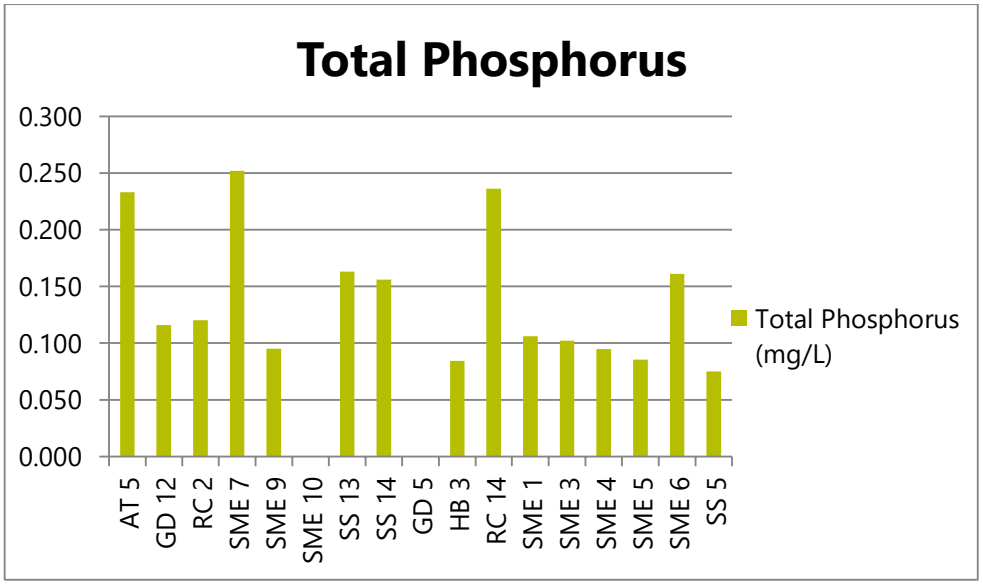
# 4.0 Analytical Results

The laboratory analytical results for the February 18, 2025 quarterly monitoring event are included in Table B.2 in Appendix II. Historical monitoring data for each of the active monitoring points is included in Appendix II as Tables B.3 to B.19. The laboratory reports and Chain of Custody are included in Appendix III.

## 4.1 Total Phosphorus

Total phosphorus was detected at 15 of 17 monitoring points evaluated during the 2025 Q1 monitoring event. As shown in Figure 4-1 below, the concentration of total phosphorus was highest at monitoring point SME 7 (0.252 mg/L), followed by point RC 14 (0.236 mg/L) and point AT 5 (0.233 mg/L). Two of the three points are located in Big Wills Creek.

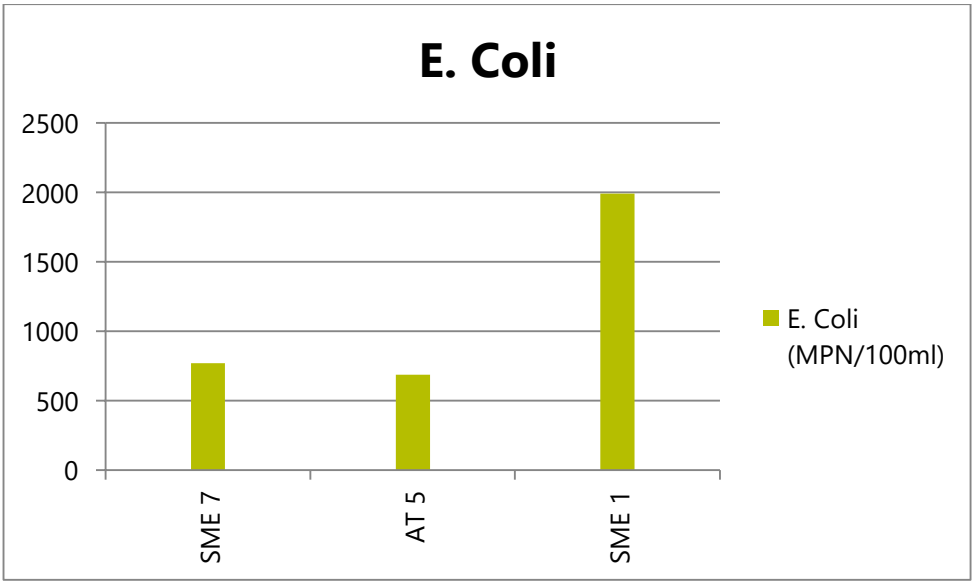
**Figure 4-1 2025 Q1 Total Phosphorus Concentrations**



## 4.2 E. Coli

E. coli was detected at all three monitoring points evaluated during the 2025 Q1 monitoring event. As shown in Figure 4-2 below, the concentration of E. coli was highest at monitoring point SME 1 (1990 MPN/100ml). The E. coli concentration at SME 7 (770 MPN/100ml) was slightly higher than the concentration observed downstream at AT 5 (687 MPN/100ml).

**Figure 4-2 2025 Q1 E. Coli Concentrations**



## 5.0 Recordkeeping

Each quarterly monitoring report will be incorporated into the Annual Report submitted by each entity. Monitoring reports will be retained by each entity for a minimum of three years.

The Storm Water Steering Committee is responsible for the coordination and implementation of the 2025 *Etowah Monitoring Partnership Wet-Weather Monitoring Program*. Current membership of the Storm Water Steering Committee is as follows:

**Table 5-1 Storm Water Steering Committee**

| Entity | Contact | Phone No. | Email |
|---|---|---|---|
| City of Attalla | Jason Nicholson | 256-441-9200 | jnicholson@attallacity.org |
| City of Gadsden | Heath Williamson | 256-549-4520 | hwilliamson@cityofgadsden.com |

| Etowah County | Robert Nail | 256-549-5358 | rnail@etowahcounty.org |

One copy of this Monitoring Report has been provided to each member of the Storm Water Steering Committee.

## 6.0 Certification of the Monitoring Report

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment for knowing violations.

## 7.0 Acknowledgement

S&ME certifies that the information provided in this monitoring report reflects the conditions reported, encountered, and discovered at the time of report preparation. When performing this scope of services, S&ME observed the degree of care and skill generally exercised by other consultants undertaking similar studies at the same time, under similar circumstances and conditions, and in the same geographic area.

## 8.0 Closing

S&ME sincerely appreciates the opportunity to provide watershed monitoring services for the Gadsden-Etowah MS4s. Should questions remain or if additional information is required, please do not hesitate to contact the undersigned.

Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Craig Cothron

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| V | The sample concentration is too high to evaluate accurate spike recoveries. |

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| V | The sample concentration is too high to evaluate accurate spike recoveries. |

## HAVE QUESTION?

The City of Rainbow City is required by the Alabama Department of Environmental Management (ADEM) to comply with the General Phase II Municipal Separate Storm Sewer System (MS4) Permit No. ALR040056. One of the conditions of the permit is to develop, implement, and enforce a Storm Water Management Program (SWMP).

The SWMP must be designed to reduce the discharge of pollutants from our MS4 to the maximum extent practicable (MEP) to protect the water quality and to satisfy the appropriate water quality requirements of the Clean Water Act. The City of Rainbow City entered into a cooperative agreement with the City of Gadsden, the City of Hokes Bluff, the City of Glencoe, the City of Attalla, the City of Southside, and Etowah County to develop an overall SWMP for each entity to implement as required to comply with the permit referenced above.

An MS4 is defined by the EPA as a conveyance or system of conveyances that is owned by a state, city, town, village, or other public entity that discharges to waters of the U.S.; designed or used to collect or convey stormwater (including storm drains, pipes, ditches, etc.); not a combined sewer; and not part of a Publicly Owned Treatment Works (sewage treatment plant).

Our SWMP contains five minimum control measures that must be included as required by the referenced permit. The City is currently in the process of taking the necessary steps to implement each control measure. The control measures are as follows:

### Public Education and Outreach

The City's goal is to have a comprehensive and effective public education and outreach program, the intent of which is to:

- Generate awareness of storm water pollution prevention by educating people about the storm drain system and its relationship to the health of local waterways.
- Change behavior patterns through education and encouragement of active participation in water pollution prevention.
- Inform the public of steps they can take to reduce pollutants in storm water runoff.

### Illicit Discharge Detection and Elimination

Rainbow City's Illicit Discharge Detection and Elimination (IDDE) program will be primarily designed to locate, identify, and correct illicit discharges to the MS4. Program emphasis will be placed on identifying and correcting pollutant discharges which could influence compliance with the Neely Henry Lake TMDL's and the Gadsden-Etowah pollutant monitoring program (as outlined in complete SWMP document).

### Construction Site Storm Water Runoff

The City's construction site storm water runoff control program is primarily designed to address storm water pollution due to off-site sedimentation by insuring the implementation of properly designed erosion and sedimentation control plans during regulated construction activities.

### Post-Construction Storm Water Management

Post-Construction runoff can significantly impact a water body by increasing the type and quantity of pollutants in storm water runoff and by increasing the quantity of water delivered to the water body during storms. As runoff flows over areas altered by development, it collects sediment and chemicals such as oil, grease, pesticides, heavy metals, and nutrients. Instead of infiltrating, water is collected from surfaces such as asphalt and concrete and routed to drainage systems where large volumes of runoff are delivered to the nearest receiving water. Both impacts can be mitigated by proper post-construction planning.

### Pollution Prevention and Good Housekeeping for Municipal Operations

Rainbow City will develop and utilize BMP's designed to minimize pollution related to municipal operations and maintenance. These BMP's are intended to address storm water pollution from nutrients, sediments, petroleum products, and other common pollutants.

# HAVE QUESTION?

For questions about the City of Rainbow City Storm-water Management Program and its implementation or to report a non-compliant construction site, illicit discharge (including spills or illegal dumping), impaired waterways, or any possible violation of ordinances relating to stormwater pollution please contact the **Rainbow City & Utilities Board Engineering Department at 256-413-1230.**

If immediate assistance is required outside of the normal operating hours of City Hall which is Monday through Friday from 8 am to 4 pm, please call the **Rainbow City Dispatch Office available 24/7 at 256-442-2511.**

# Protecting Water Quality *from* URBAN RUNOFF

*Clean Water Is Everybody's Business*

In urban and suburban areas, much of the land surface is covered by buildings and pavement, which do not allow rain and snowmelt to soak into the ground. Instead, most developed areas rely on storm drains to carry large amounts of runoff from roofs and paved areas to nearby waterways. The stormwater runoff carries pollutants such as oil, dirt, chemicals, and lawn fertilizers directly to streams and rivers, where they seriously harm water quality. To protect surface water quality and groundwater resources, development should be designed and built to minimize increases in runoff.

The most recent National Water Quality Inventory reports that runoff from urbanized areas is the leading source of water quality impairments to surveyed estuaries and the third-largest source of impairments to surveyed lakes.

***Did you know that because of impervious surfaces like pavement and rooftops, a typical city block generates more than 5 times more runoff than a woodland area of the same size?***

## How Urbanized Areas Affect Water Quality

### Increased Runoff

The porous and varied terrain of natural landscapes like forests, wetlands, and grasslands traps rainwater and snowmelt and allows them to filter slowly into the ground. In contrast, impervious (nonporous) surfaces like roads, parking lots, and rooftops prevent rain and snowmelt from infiltrating, or soaking, into the ground. Most of the rainfall and snowmelt remains above the surface, where it runs off rapidly in unnaturally large amounts.

Storm sewer systems concentrate runoff into smooth, straight conduits. This runoff gathers speed and erosional power as it travels underground. When this runoff leaves the storm drains and empties into a stream, its excessive volume and power blast out streambanks, damaging streamside vegetation and wiping out aquatic habitat. These increased storm flows carry sediment loads from construction sites and other denuded surfaces and eroded streambanks. They often carry higher water temperatures from streets, roof tops, and parking lots, which are harmful to the health and reproduction of aquatic life.

The loss of infiltration from urbanization may also cause profound groundwater changes. Although urbanization leads to great increases in flooding during and immediately after wet weather, in many instances it results in lower stream flows during dry weather. Many native fish and other aquatic life cannot survive when these conditions prevail.

### Increased Pollutant Loads

Urbanization increases the variety and amount of pollutants carried into streams, rivers, and lakes. The pollutants include:

- Sediment
- Oil, grease, and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria, and nutrients from pet waste and faili…
- Road salts
- Heavy metals from roof shingles, …motor vehicles, and other sources
- …nal pollution from dark …rious surfaces such as streets …ooftops

…pollutants can harm fish and …populations, kill native …, foul drinking water …and make recreational areas …nd unpleasant.

## A Citizen's Guide to Understanding Stormwater

WHEN IT RAINS IT DRAINS

# What is stormwater runoff?

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater from naturally soaking into the ground.

# Why is stormwater runoff a problem?

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a storm sewer system or directly to a lake, stream, river, wetland, or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and providing drinking water.

# The effects of pollution

Polluted stormwater runoff can have many adverse effects on plants, fish, animals, and people.

- Sediment can cloud the water and make it difficult or impossible for aquatic plants to grow. Sediment also can destroy aquatic habitats.
- Excess nutrients can cause algae blooms. When algae die, they sink to the bottom and decompose in a process that removes oxygen from the water. Fish and other aquatic organisms can't exist in water with low dissolved oxygen levels.
- Bacteria and other pathogens can wash into swimming areas and create health hazards, often making beach closures necessary.

- Debris—plastic bags, six-pack rings, bottles, and cigarette butts—washed into waterbodies can choke, suffocate, or disable aquatic life like ducks, fish, turtles, and birds.
- Household hazardous wastes like insecticides, pesticides, paint, solvents, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick or die from eating diseased fish and shellfish or ingesting polluted water.
- Polluted stormwater often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

# Stormwater Pollution Solutions

## Residential

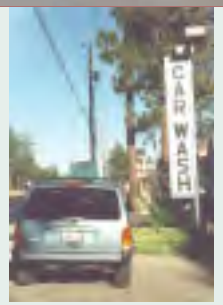
*Recycle or properly dispose of household products that contain chemicals, such as insecticides, pesticides, paint, solvents, and used motor oil and other auto fluids. Don't pour them onto the ground or into storm drains.*

### Lawn care

Excess fertilizers and pesticides applied to lawns and gardens wash off and pollute streams. In addition, yard clippings and leaves can wash into storm drains and contribute nutrients and organic matter to streams.

- Don't overwater your lawn. Consider using a soaker hose instead of a sprinkler.
- Use pesticides and fertilizers sparingly. When use is necessary, use these chemicals in the recommended amounts. Use organic mulch or safer pest control methods whenever possible.
- Compost or mulch yard waste. Don't leave it in the street or sweep it into storm drains or streams.
- Cover piles of dirt or mulch being used in landscaping projects.

### Auto care



Washing your car and degreasing auto parts at home can send detergents and other contaminants through the storm sewer system. Dumping automotive fluids into storm drains has the same result as dumping the materials directly into a waterbody.

- Use a commercial car wash that treats or recycles its wastewater, or wash your car on your yard so the water infiltrates into the ground.
- Repair leaks and dispose of used auto fluids and batteries at designated drop-off or recycling locations.

### Septic systems

Leaking and poorly maintained septic systems release nutrients and pathogens (bacteria and viruses) that can be picked up by stormwater and discharged into nearby waterbodies. Pathogens can cause public health problems and environmental concerns.

- Inspect your system every 3 years and pump your tank as necessary (every 3 to 5 years).
- Don't dispose of household hazardous waste in sinks or toilets.

### Pet waste

Pet waste can be a major source of bacteria and excess nutrients in local waters.

- When walking your pet, remember to pick up the waste and dispose of it properly. Flushing pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

*Education is essential to changing people's behavior. Signs and markers near storm drains warn residents that pollutants entering the drains will be carried untreated into a local waterbody.*

## Residential landscaping

**Permeable Pavement**—Traditional concrete and asphalt don't allow water to soak into the ground. Instead these surfaces rely on storm drains to divert unwanted water. Permeable pavement systems allow rain and snowmelt to soak through, decreasing stormwater runoff.

**Rain Barrels**—You can collect rainwater from rooftops in mosquito-proof containers. The water can be used later on lawn or garden areas.

**Rain Gardens and Grassy Swales**—Specially designed areas planted with native plants can provide natural places for rainwater to collect and soak into the ground. Rain from rooftop areas or paved areas can be diverted into these areas rather than into storm drains.

**Vegetated Filter Strips**—Filter strips are areas of native grass or plants created along roadways or streams. They trap the pollutants stormwater picks up as it flows across driveways and streets.

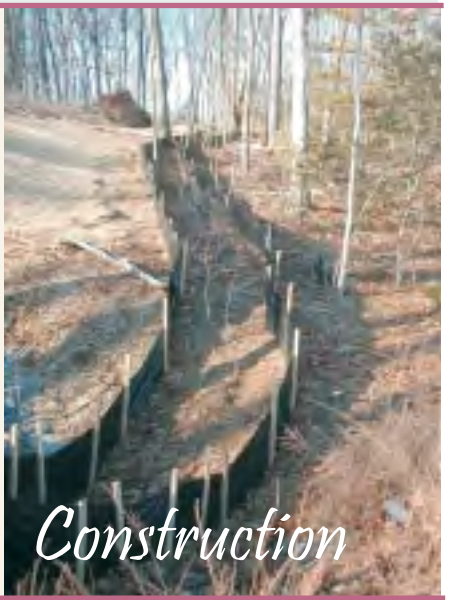
## Commercial

Dirt, oil, and debris that collect in parking lots and paved areas can be washed into the storm sewer system and eventually enter local waterbodies.

- Sweep up litter and debris from sidewalks, driveways and parking lots, especially around storm drains.
- Cover grease storage and dumpsters and keep them clean to avoid leaks.
- Report any chemical spill to the local hazardous waste cleanup team. They'll know the best way to keep spills from harming the environment.

Erosion controls that aren't maintained can cause excessive amounts of sediment and debris to be carried into the stormwater system. Construction vehicles can leak fuel, oil, and other harmful fluids that can be picked up by stormwater and deposited into local waterbodies.

- Divert stormwater away from disturbed or exposed areas of the construction site.
- Install silt fences, vehicle mud removal areas, vegetative cover, and other sediment and erosion controls and properly maintain them, especially after rainstorms.
- Prevent soil erosion by minimizing disturbed areas during construction projects, and seed and mulch bare areas as soon as possible.

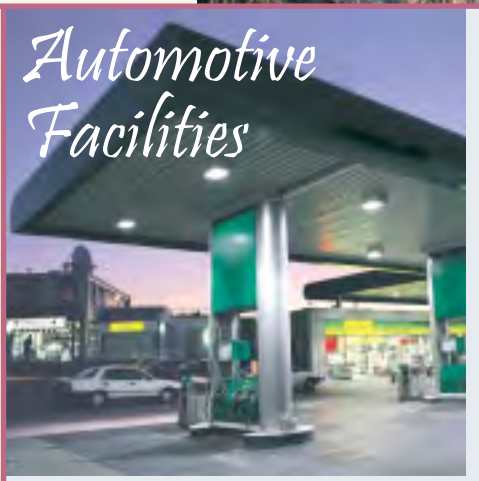


## Construction

## Agriculture

Lack of vegetation on streambanks can lead to erosion. Overgrazed pastures can also contribute excessive amounts of sediment to local waterbodies. Excess fertilizers and pesticides can poison aquatic animals and lead to destructive algae blooms. Livestock in streams can contaminate waterways with bacteria, making them unsafe for human contact.

- Keep livestock away from streambanks and provide them a water source away from waterbodies.
- Store and apply manure away from waterbodies and in accordance with a nutrient management plan.
- Vegetate riparian areas along waterways.
- Rotate animal grazing to prevent soil erosion in fields.
- Apply fertilizers and pesticides according to label instructions to save money and minimize pollution.



## Automotive Facilities

Uncovered fueling stations allow spills to be washed into storm drains. Cars waiting to be repaired can leak fuel, oil, and other harmful fluids that can be picked up by stormwater.

- Clean up spills immediately and properly dispose of cleanup materials.
- Provide cover over fueling stations and design or retrofit facilities for spill containment.
- Properly maintain fleet vehicles to prevent oil, gas, and other discharges from being washed into local waterbodies.
- Install and maintain oil/water separators.

## Forestry

Improperly managed logging operations can result in erosion and sedimentation.

- Conduct preharvest planning to prevent erosion and lower costs.
- Use logging methods and equipment that minimize soil disturbance.
- Plan and design skid trails, yard areas, and truck access roads to minimize stream crossings and avoid disturbing the forest floor.
- Construct stream crossings so that they minimize erosion and physical changes to streams.
- Expedite revegetation of cleared areas.

Today is the last day of National Water Quality Awareness Month!

On average, each person uses about 80 gallons of water per day for bathing, cleaning, household activities, and drinking. However, individual water usage can vary significantly based on location, population density, and available treatment infrastructure. Protecting our water resources and promoting public awareness of water quality are crucial goals of #NWQAM.

## What Is Stormwater Management ?

Stormwater management involves management of both water quantity and water quality for runoff in urban and suburban areas. Your community is probably already doing a number of things to manage storm-water. If nothing else, it has most likely designed plans and constructed systems to attempt to manage the problems caused by too much runoff or flooding. It may also already have in place education or ordinances for control of some stormwater pollutants such as sediment from construction sites or dumping of oil and other wastes down storm drains.

## Why Is Stormwater Management Receiving So Much Attention These Days?

From a national perspective, after runoff from agriculture, the impacts of stormwater runoff are the most common reason for impairment of water quality in our streams, rivers, lakes and estuaries. The writers of the Clean Water Act and the U.S. EPA recognized the significant problems posed by storm water runoff some time ago. Metropolitan areas with a population over 100,000 (Phase I cities) have been required to have stormwater permits and management programs since 1990.

From an Alabama perspective, county by county assessments of water related environmental problems conducted by local citizens identified increased flooding downstream of urban and suburban areas as one of, if not the most frequent and serious environmental concern.

As a result of the seriousness and magnitude of storm-water impacts, regulations are scheduled to go into effect in 2003 to address stormwater management in metropolitan areas with a population of 50,000 or more, or in other areas where stormwater impacts exist or are likely to exist. This brochure is prepared to assist these communities (Phase II stormwater communities). It also may serve as a tool for communities that recognize that proactive stormwater management can help to avoid problems and expenses related to storm-water and thus should be considered even if they are not required to obtain a permit.

***Front panel photo shows poor housekeeping (storage of materials in riparian zone too near stream) and disturbances in riparian zone on opposite bank of stream.***

## How Can I Determine If My Community Will Have To Obtain A Permit And Develop A Stormwater Management Program?

Some Phase II stormwater communities were listed in the legislation that created the stormwater program. Some were designated because the communities were in an urbanized area as identified by the 1990 census. Other communities may be listed for a variety of reasons including projected future growth, existing water quality impairments, or because they have special water quality concerns or problems (for example ongoing problems such as NPDES violations at a municipal wastewater treatment facility).

### Phase II Communities Based Upon the 1990 Census

| | |
|---|---|
| Anniston | Florence |
| Auburn—Opelika | Gadsden |
| Birmingham | Huntsville |
| Columbus, GA—AL | Mobile |
| Decatur | Montgomery |
| Dothan | Tuscaloosa |

Note: Five of these cities/areas, Birmingham, Montgomery, Huntsville, Mobile and Shelby County are covered by a Phase I stormwater permit.

### Potentially Designated Cities

Jacksonville and Selma

Population increases from the 2000 census could cause additional areas to be designated.

## What Else Might Cause My Community To Be Designated A Phase II Community?

The Alabama Department of Environmental Management is required to develop criteria for determining which additional areas with stormwater systems and populations of 10,000 or more or population densities of 1000 or more per square mile will be required to obtain permits.The U.S. EPA has suggested criteria that will likely be included in consideration of whether these smaller communities will be required to obtain a Phase II Stormwater permit. In cases where the community -

- Has a sensitive waters discharge
- Is a high growth area
- Is near an urban area
- Has discharges exceeding WQ standard
- Is a significant polluter
- Has poor WQ control programs

it is likely that a Phase II Stormwater permit will be required. The more of these conditions that are true, the more likely a community is to be listed.

A community that may be a candidate for requiring a permit could conceivably avoid being listed if only one or two of the above conditions exist and the community has in place programs or ordinances which are capable of successfully addressing the concerns. Also, by being proactive on stormwater management, communities might avoid being designated as a result of citizen requests for a community to be designated.

### Phase II Communities Designated By Being Listed in the Legislation

| | |
|---|---|
| Anniston | Flint City |
| Attalla | Florence |
| Auburn | Gadsden |
| Autauga County | Glencoe |
| Blue Mountain | Grimes |
| Calhoun County | Hartselle |
| Colbert County | Hobson City |
| Dale County | Hokes Bluff |
| Decatur | Houston County |
| Dothan | Kinsey |
| Etowah County | Lauderdale Co. |
| Lee County | Prattville |
| Madison County | Priceville |
| Midland City | Rainbow City |
| Montgomery County | Russell County |
| Morgan County | Sheffield |
| Muscle Shoals | Southside |
| Napier Field | Sylvan Springs |
| Northport | Talladega County |
| Opelika | Tuscaloosa |
| Oxford | Tuscaloosa Co. |
| Phenix City | Tuscumbia |
| | Weaver |

## When Does A Designated Phase II City Have To Act and What Will It Have To Do To Meet Permit Requirements?

Automatically designated communities have to submit a permit application by March 10th, 2003. Other designated communities have to submit a permit application within 180 days after notification. (There may be some slack in this schedule but these dates and time frames are what your community could be held to as things stand at the present time). If the state issues a general permit and your community wishes to fall under the general permit an NOI or "Notice Of Intent" must be filed. If there is no general permit or if your community does not want to fall under the general permit it will have to submit an application for an individual permit.

The basic requirements of the Phase II permit should be considered to be the "minimum" requirements. Your community may wish to do more to prevent stormwater impacts than the permit requires. It may also decide to do more than the permit requires to monitor water quality improvements due to the storm-water program.

### MINIMUM CONTROLS

1. Public Education and Outreach
2. Public Involvement/ Participation
3. Illicit Discharge Elimination
4. Construction Site Runoff Control
5. Post-Construction Runoff Mgt.
6. Pollution Prevention/Good Housekeeping for Municipal Operations

Note: In addition to these minimum control measures there may also be other require-ments as established in the NPDES general or individual permit developed consistent with the provisions of §§ 122.41 through 122.49, as appropriate.

Also, your community does not have to and should not wait until the application deadline to begin stormwater management activities. Delays may only add to future problems that might have been avoided had stormwater management activities started earlier. Starting now may allow some activities to be conducted in a more organized and cost efficient manner.

## What Will Be Required and What Are Some Ways to Satisfy the Requirements?

### Public Education and Outreach:

- Distribute educational materials
- Inform citizens of steps they can take
- Target groups of stakeholders (schools, churches, civic clubs, environmental groups and other appropriate local groups) that your community can partner with

### Public Involvement:

- Note and follow public notice requirements
- Involve citizen conservation or environmental groups
- Target key groups with education and encouragement to obtain diverse stakeholder involvement
- Establish an advisory group representing a cross-section of stakeholders and groups and individuals who bring special talents to the process

### Illicit Discharges:

- Prepare stormwater system map showing all outfalls and known "hotspots"
- Enact an appropriate ordinance with enforcement provisions
- Implement a detection and elimination plan
- Implement an anti-dumping program
- Include illicit discharges and anti-dumping information in education campaign

### Construction Sites:

- Develop program for controlling runoff from construction sites larger than one acre
- Implement construction site portion of the stormwater ordinance
- Conduct reviews of construction plans and inspect construction sites
- Institute a permitting program with BMPs (this might be requirements added to building permits via the stormwater ordinance)
- Implement program to receive and address complaints about building sites
- Revise subdivision regulations as needed to address flow control and erosion and sediment control

### Post-Construction BMPs:

- Implement maintenance/inspection program
- Require post-construction BMP plan from the developer
- Require maintenance of BMPs
- Make preference for non-structural BMPs known to developers and if possible create incentives for non-structural BMPs
- Post-development conditions (flow, water temperature and so forth) should be as close to predevelopment conditions as possible (this should be an element of the stormwater ordinance).

### Municipal Operations:

- Implement plans for eliminating preventable pollution from municipal operations
- Provide employee training needed to accomplish the pollution reduction
- Implement maintenance program
- Implement program to reduce street and highway pollution
- Implement waste disposal program
- Implement flood management program

## OTHER IMPORTANT STORMWATER MANAGEMENT CONSIDERATIONS

- Prevention measures or techniques, such as using urban design to prevent stormwater impacts, are typically much more effective and less costly than applying BMPs
- Although monitoring is not specifically listed as a requirement for Phase II permit holders, some type of monitoring or accounting for water quality and water quality trends will undoubtedly be needed
- Non-structural best management practices (BMPs) are generally preferred due to lower cost and lower maintenance requirements
- Many smaller communities adjoining larger towns and cities are going to have a very hard time carrying out the requirements of a stormwater permit and need to seek a partnership with the larger community in the form of a regional stormwater management authority

## RESOURCES

**Alabama NEMO Project:** This project provides education and technical assistance to communities on planning, design and other measures for reducing the stormwater impacts related to urban development while addressing related quality of life issues. To arrange an introductory presentation on the NEMO concepts contact Gavin Adams at 334-394-4353 or call the ADEM Ombudsman Office at 1-800-533-ADEM.

**Center for Watershed Protection:** The Center for Watershed Protection has excellent technical publications on urban watershed management. Some examples of such publications include:

- Rapid Watershed Planning Handbook
- National Pollutant Removal Performance Database—2000, 2nd Edition
- Better Site Design
- Eight Tools of Watershed Protection
- Watershed Protection Techniques (Volume 1 # 2 is available on the EPA Website)

# Protecting Water Quality *from* URBAN RUNOFF

## Clean Water Is Everybody's Business

In urban and suburban areas, much of the land surface is covered by buildings and pavement, which do not allow rain and snowmelt to soak into the ground. Instead, most developed areas rely on storm drains to carry large amounts of runoff from roofs and paved areas to nearby waterways. The stormwater runoff carries pollutants such as oil, dirt, chemicals, and lawn fertilizers directly to streams and rivers, where they seriously harm water quality. To protect surface water quality and groundwater resources, development should be designed and built to minimize increases in runoff.

The most recent National Water Quality Inventory reports that runoff from urbanized areas is the leading source of water quality impairments to surveyed estuaries and the third-largest source of impairments to surveyed lakes.

***Did you know that because of impervious surfaces like pavement and rooftops, a typical city block generates more than 5 times more runoff than a woodland area of the same size?***

## How Urbanized Areas Affect Water Quality

### Increased Runoff

The porous and varied terrain of natural landscapes like forests, wetlands, and grasslands traps rainwater and snowmelt and allows them to filter slowly into the ground. In contrast, impervious (nonporous) surfaces like roads, parking lots, and rooftops prevent rain and snowmelt from infiltrating, or soaking, into the ground. Most of the rainfall and snowmelt remains above the surface, where it runs off rapidly in unnaturally large amounts.

Storm sewer systems concentrate runoff into smooth, straight conduits. This runoff gathers speed and erosional power as it travels underground. When this runoff leaves the storm drains and empties into a stream, its excessive volume and power blast out streambanks, damaging streamside vegetation and wiping out aquatic habitat. These increased storm flows carry sediment loads from construction sites and other denuded surfaces and eroded streambanks. They often carry higher water temperatures from streets, roof tops, and parking lots, which are harmful to the health and reproduction of aquatic life.

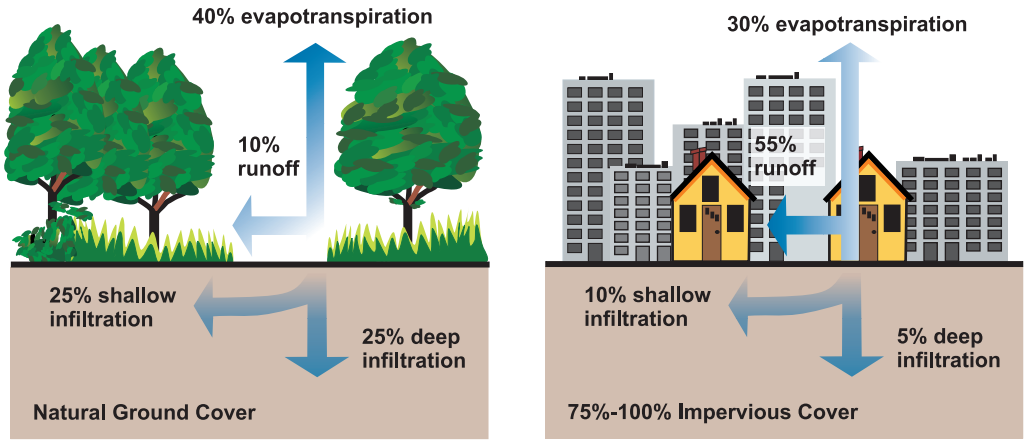
The loss of infiltration from urbanization may also cause profound groundwater changes. Although urbanization leads to great increases in flooding during and immediately after wet weather, in many instances it results in lower stream flows during dry weather. Many native fish and other aquatic life cannot survive when these conditions prevail.

### Increased Pollutant Loads

Urbanization increases the variety and amount of pollutants carried into streams, rivers, and lakes. The pollutants include:

- Sediment
- Oil, grease, and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria, and nutrients from pet waste and failing septic systems
- Road salts
- Heavy metals from roof shingles, motor vehicles, and other sources
- Thermal pollution from dark impervious surfaces such as streets and rooftops

These pollutants can harm fish and wildlife populations, kill native vegetation, foul drinking water supplies, and make recreational areas unsafe and unpleasant.



*Relationship between impervious cover and surface runoff. Impervious cover in a watershed results in increased surface ruunoff. As little as 10 percent impervious cover in a watershed can result in stream degradation.*

## Managing Urban Runoff

### What Homeowners Can Do

To decrease polluted runoff from paved surfaces, households can develop alternatives to areas traditionally covered by impervious surfaces. Porous pavement materials are available for driveways and sidewalks, and native vegetation and mulch can replace high maintenance grass lawns. Homeowners can use fertilizers sparingly and sweep driveways, sidewalks, and roads instead of using a hose. Instead of disposing of yard waste, they can use the materials to start a compost pile. And homeowners can learn to use Integrated Pest Management (IPM) to reduce dependence on harmful pesticides.

In addition, households can prevent polluted runoff by picking up after pets and using, storing, and disposing of chemicals properly. Drivers should check their cars for leaks and recycle their motor oil and antifreeze when these fluids are changed. Drivers can also avoid impacts from car wash runoff (e.g., detergents, grime, etc.) by using car wash facilities that do not generate runoff. Households served by septic systems should have them professionally inspected and pumped every 3 to 5 years. They should also practice water conservation measures to extend the life of their septic systems.

### Controlling Impacts from New Development

Developers and city planners should attempt to control the volume of runoff from new development by using low impact development, structural controls, and pollution prevention strategies. Low impact development includes measures that conserve natural areas (particularly sensitive hydrologic areas like riparian buffers and infiltrable soils); reduce development impacts; and reduce site runoff rates by maximizing surface roughness, infiltration opportunities, and flow paths.

### Controlling Impacts from Existing Development

Controlling runoff from existing urban areas is often more costly than controlling runoff from new developments. Economic efficiencies are often realized through approaches that target "hot spots" of runoff pollution or have multiple benefits, such as high-efficiency street sweeping (which addresses aesthetics, road safety, and water quality). Urban planners and others responsible for managing urban and suburban areas can first identify and implement pollution prevention strategies and examine source control opportunities. They should seek out priority pollutant reduction opportunities, then protect natural areas that help control runoff, and finally begin ecological restoration and retrofit activities to clean up degraded water bodies. Local governments are encouraged to take lead roles in public education efforts through public signage, storm drain marking, pollution prevention outreach campaigns, and partnerships with citizen groups and businesses. Citizens can help prioritize the clean-up strategies, volunteer to become involved in restoration efforts, and mark storm drains with approved "don't dump" messages.

## Protect Natural Features

**Bad** **Good**

- Minimize clearing.
- Minimize the amount of exposed soil.
- Identify and protect areas where existing vegetation, such as trees, will not be disturbed by construction activity.
- Protect streams, stream buffers, wild woodlands, wetlands, or other sensitive areas from any disturbance or construction activity by fencing or otherwise clearly marking these areas.

## Construction Phasing

**Bad** **Good**

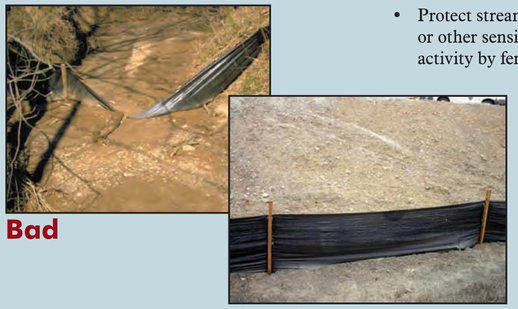
- Sequence construction activities so that the soil is not exposed for long periods of time.
- Schedule or limit grading to small areas.
- Install key sediment control practices before site grading begins.
- Schedule site stabilization activities, such as landscaping, to be completed immediately after the land has been graded to its final contour.

## Vegetative Buffers

**Bad** **Good**

- Protect and install vegetative buffers along waterbodies to slow and filter stormwater runoff.
- Maintain buffers by mowing or replanting periodically to ensure their effectiveness.

## Silt Fencing



**Bad** **Good**

- Inspect and maintain silt fences after each rainstorm.
- Make sure the bottom of the silt fence is buried in the ground.
- Securely attach the material to the stakes.
- Don't place silt fences in the middle of a waterway or use them as a check dam.
- Make sure stormwater is not flowing around the silt fence.

# Maintain your BMPs!

*www.epa.gov/npdes/menuofbmps*

## Site Stabilization

**Bad** **Good**

- Vegetate, mulch, or otherwise stabilize all exposed areas as soon as land alterations have been completed.

## Construction Entrances

**Bad** **Good**

- Remove mud and dirt from the tires of construction vehicles before they enter a paved roadway.
- Properly size entrance BMPs for all anticipated vehicles.
- Make sure that the construction entrance does not become buried in soil.

## Slopes

**Bad** **Good**

- Rough grade or terrace slopes.
- Break up long slopes with sediment barriers, or under drain, or divert stormwater away from slopes.

## Dirt Stockpiles

**Bad** **Good**

- Cover or seed all dirt stockpiles.

## Storm Drain Inlet Protection

**Bad** **Good**

- Use rock or other appropriate material to cover the storm drain inlet to filter out trash and debris.
- Make sure the rock size is appropriate (usually 1 to 2 inches in diameter).
- If you use inlet filters, maintain them regularly.

# Costs of Low Impact Development

## LID Saves Money and Protects Your Community's Resources

LID Barrier Busters Fact Sheet Series

## Are Low Impact Development (LID) Practices More Economical Than Conventional Practices?

In many cases, the answer is yes. LID typically includes a variety of low-cost elements such as bioswales that retain rain water and encourage it to soak into the ground rather than allowing it to run off into storm drains where it would otherwise contribute to flooding and pollution problems. LID projects typically include smaller overall development footprints, reduce the amount of runoff generated and increase the amount of natural areas on a site, thereby reducing costs when compared to traditional stormwater management and flood control.

**FAQ**

Isn't LID too costly?

***Barrier Busted!***

Communities recognize that using LID can save money.

EPA's LID Barrier Busters fact sheet series...helping to overcome misperceptions that can block adoption of LID in your community

### Example Economic Benefits of LID Elements

- Adding roadside bioswales, making roads narrower and designing smaller or porous parking lots with on-site runoff retention **saves money by reducing the amount of pavement, curbs and gutters needed**.
- Installing green roofs, disconnecting roof downspouts from impervious surfaces (driveways or streets), and incorporating bioretention areas to capture on-site runoff **saves money by eliminating the need for costly runoff detention basins and pipe delivery systems**.
- Designing more compact residential lots **saves money by reducing site grading and building preparation costs, and can increase the number of lots available for sale**.
- Preserving natural features in the neighborhood **can increase the value and sale price of residential lots**.
- Using existing trees and vegetation **saves money by reducing landscaping costs and decreasing stormwater volume**.

This 4-acre grassed overflow parking lot at a mall in West Hartford, CT cost $500,000—half the cost of a traditional parking lot.

### Cost-Savings Nationwide: LID Case Studies

A U.S. Environmental Protection Agency study of 17 LID case studies around the country found that, in the majority of cases, total capital cost savings ranged from 15 to 80 percent when LID methods were used. (For details, see **www.epa.gov/nps/lid/costs07**.)

- **Sherwood, Arkansas:** Gap Creek subdivision included 23.5 acres of open, buffered natural drainage areas and traffic-calming circles that allowed the developer to reduce street widths. Results? The lots sold for $3,000 more and cost $4,800 less to develop than comparable conventional lots. The LID design required less land for stormwater control features, which allowed the developer to create and sell 17 additional lots.

Street drainage flows into this roadside bioswale in Lenexa, Kansas. The city found that on-site detention with LID practices cost 25 percent less than traditional stormwater management retrofits.

- **Seattle, Washington:** Seattle's 2nd Avenue Street Edge Alternative project redesigned an entire block with LID techniques such as bioswales in the rights-of-way. Results? Reducing street widths and sidewalks lowered paving costs by 49 percent. Overall, incorporating LID techniques cost $651,548—a savings of $217,255 compared to a conventional retrofit of the block, which would have cost an estimated $868,803.
- **Naperville, Illinois**: Developers at the 55-acre Tellabs corporate campus preserved much of the site's natural drainage features and topography, reducing grading and earthwork costs. They used bioswales and other infiltration techniques in parking lots to manage stormwater. They maximized the amount of natural areas, eliminating the need for irrigation systems and lowering maintenance costs when compared to turf grass. Results? As seen in the table below, total LID project costs were $461,510 less than a conventional design would have been.

### Sample Costs: Comparing Conventional Stormwater Controls with LID Techniques in a Corporate Development (Tellabs) in Naperville, Illinois

| Construction Item | Cost of Conventional Development | Cost When Using LID Practices | Dollars Saved with LID |
|---|---|---|---|
| Site preparation | $2,178,500 | $1,966,000 | $212,500 |
| Stormwater management | $480,910 | $418,000 | $62,910 |
| Landscape development | $502,750 | $316,650 | $186,100 |
| **Total** | **$3,162,160** | **$2,700,650** | **$461,510** |

## LID Provides Added Value for Communities

Besides reducing the capital and other actual costs, using LID practices provides numerous additional economic benefits, some of which are difficult to quantify, including:

- Improved aesthetics for communities
- Expanded recreational opportunities
- Increased property values due to the desirability of the lots and their proximity to open space
- Increased marketing potential and faster sales for residential and commercial properties
- Reduced stream channel damage and pollutant loadings in downstream waters
- Reduced drinking water treatment costs
- Reduced costs associated with combined sewer overflows, where applicable

LID offers great flexibility for developing and re-developing properties. A wide range of LID technology choices are available to match the needs of individual sites and the desires of the parties developing or buying the property.

A roadside swale captures and retains runoff in Seattle, Washington. The city saves money with LID by avoiding costly stormwater infrastructure and reducing paving costs.

This bioretention pond in Wilsonville, Oregon collects runoff from the rooftops, sidewalks and yards. The pond offers valuable aesthetic and wildlife habitat benefits while also reducing stormwater control costs.

Philadelphia has been expanding its use of LID by implementing new policies and demonstration projects, such as this roadside bioswale that treats runoff from an adjacent parking lot. The city's use of LID has reduced stormwater runoff volume, saving approximately $170 million in combined sewer overflow costs since 2006.

# Effectiveness of Low Impact Development

## Proven LID Technologies Can Work for Your Community

LID Barrier Busters Fact Sheet Series

**Low Impact Development (LID)** includes a variety of practices such as bioswales and porous paving that mimic natural processes by retaining rain water and allowing it to soak into the ground. Studies have shown that LID practices offer significant environmental benefits over conventional stormwater management practices (where runoff is shunted quickly into detention basins or directly to streams). By holding water onsite, LID practices reduce the amount of runoff generated during a rainstorm, alleviating downstream erosion and stream habitat damage. In addition, LID practices filter out pollutants such as oil, bacteria, sediment and nutrients as the collected water seeps through vegetation and soil. The water that eventually reaches groundwater and surface water is much cleaner.

This fact sheet highlights the environmental benefits of several LID projects across the country. Separate fact sheets in EPA's *LID Barrier Busters* series focus on cost and aesthetic benefits achieved by LID.

### FAQ

Isn't LID less effective than conventional stormwater management?

***Barrier Busted!***

LID successfully controls polluted runoff across the nation.

EPA's LID Barrier Busters fact sheet series… helping to overcome misperceptions that can block adoption of LID in your community

## Case Studies: LID Environmental Successes Span the United States

### *Seattle, Washington*

Seattle launched its Street Edge Alternatives (SEA Street) neighborhood demonstration project in 2000. The city incorporated LID practices to improve stormwater management on 600 linear feet of street (comprising a drainage area of 2.3 acres). The project reduced impervious surfaces by 11 percent when compared to a traditional street, provided surface detention in roadside swales, and added more than 1,200 new trees and shrubs.

**Results?** The volume of stormwater leaving the street declined by 99 percent. LID practices absorbed all dry season flow and 98 percent of wet season flow.

In 2003 Seattle implemented the Northwest 110th Cascade project, replacing 1,400 linear feet of existing ditches and culverts with a series of stair-stepped natural pools that slow damaging stormwater flows, encourage infiltration and trap pollutants from a 28-acre basin.

**Results?** The LID practices significantly reduce the amount of runoff that reaches a nearby creek. Discharge volumes declined between 48 and 74 percent. In fact, the basin released water into the creek in only 49 of 235 measurable storms. Monitoring showed that the LID practices also filtered out a lot of the pollution carried in the stormwater (Table 1).

For more information about the Seattle projects (including virtual tours), go to **www.seattle.gov** and type "natural drainage" into the search box.

Table 1. NW 110th Cascade Project: Pollutant Removal (2004–2006)

| Pollutant | Pollutant Mass Loading Reductions[1] |
|---|---|
| Total suspended solids | 84% |
| Total nitrogen | 63% |
| Total phosphorus | 63% |
| Total copper | 83% |
| Dissolved copper | 67% |
| Total zinc | 76% |
| Dissolved zinc | 55% |
| Total lead | 90% |
| Motor oil | 92% |

[1] As compared to traditional street drainage

*Source: Horner and Chapman, 2007. NW 110th Street Natural Drainage System Performance Monitoring (www.seattle.gov)*

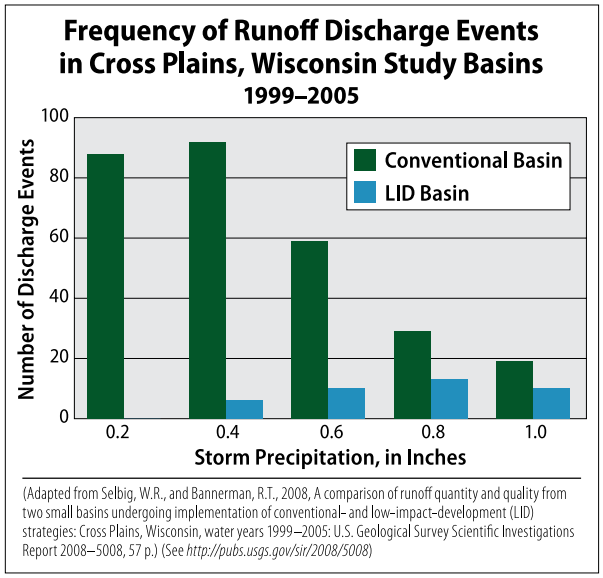
Seattle's SEA Street project (top of photo) uses numerous LID practices including rain gardens, vegetated swales and a narrow, winding street. A typical Seattle street (bottom of photo), by comparison, has a broad, wide street and flat yards with few natural depressions to capture and store stormwater runoff.

A stair-stepped pool slows runoff in Seattle's NW 110th Cascade project.

## *Cross Plains, Wisconsin*

Between 1999 and 2005, the U.S. Geological Survey monitored water quality from two similar developments—one fitted with conventional drainage (wide streets, curbs, gutters and storm sewers leading to a detention basin) and the other with LID practices (grass swales, small detention areas followed by a large infiltration basin, infiltration trenches and narrow street widths).

**Results?** The LID basin reduced the frequency of discharge, runoff volume and peak flows for most storms, which also greatly reduced pollutant loads. Data show that for storms with precipitation depths of 0.4 inches or less, the LID basin discharged runoff only six times, compared to 180 times in the conventional basin (see chart). Overall, the LID basin released a total discharge volume roughly one-tenth that of the conventional basin.



(Adapted from Selbig, W.R., and Bannerman, R.T., 2008, A comparison of runoff quantity and quality from two small basins undergoing implementation of conventional- and low-impact-development (LID) strategies: Cross Plains, Wisconsin, water years 1999–2005: U.S. Geological Survey Scientific Investigations Report 2008–5008, 57 p.) (See *http://pubs.usgs.gov/sir/2008/5008*)

## *Philadelphia, Pennsylvania*

The city's sewer collection system includes 40 percent municipal separate storm sewer system (a pipe that carries stormwater runoff and empties into a local waterway) and 60 percent combined sewer (a pipe that carries both raw sewage and runoff to a treatment facility). In times of heavy rain, the runoff introduced into the combined sewer can overwhelm the collection system and lead to discharge of untreated sewage directly into surface waters. To reduce the amount of stormwater runoff reaching the combined sewer, Philadelphia is implementing LID practices such as stormwater planters, stormwater bump-outs, stormwater wetlands, rain gardens and porous paving, among others (see **www.phillywatersheds.org/BigGreenMap** for project locations).

**Results?** Over a two-year period the city replaced an estimated two square miles of impervious cover (e.g., parking lots, roads) with LID practices, reducing runoff during this time by a half billion gallons. Storing an equivalent amount of combined sewer overflow would have cost the city an estimated $340 million. One project, the Saylor Grove stormwater wetland, was designed by the Philadelphia Water Department to capture and filter the first 0.7 inch of every rainfall event falling over a 156-acre urban watershed—treating 70 million gallons of runoff and preventing approximately 13 tons of sediment from reaching the local creek each year. For a comprehensive look at benefits gained through Philadelphia's LID approach, see **http://water.epa.gov/infrastructure/greeninfrastructure/upload/gi_philadelphia_bottomline.pdf**.

## Need More Information to Share with Others?

The University of New Hampshire's Stormwater Center offers online presentations about the effectiveness of various types of LID practices (**www.unh.edu/unhsc/presentations**). For links to more LID resources, see **www.epa.gov/nps/lid**.

Unfortunately due to weather Mike Clellan and I have canceled the Cleanup scheduled for tomorrow in the Rainbow City and Southside area. Even if the rain holds off the threat of strong wind will keep us off the water.

I am truly grateful for everyone this year and wished we could have been able to have the long week event but my first priority is safety for all our wonderful volunteers.

Once again THANK YOU for all the support and help not only for this year's event but for the last 25 Years!!

Lisa

**City of Southside, Alabama**
January 15 ·

♻️ Over 2024, the City of Southside has collected around 100 tons of cardboard thanks to several factors. Having our own trailers has been incredibly beneficial, as we can place them in convenient locations for our residents, which helps encourage higher participation rates. This flexibility also allows us to move the trailers around and empty them as needed.

🏞️ Additionally, with the recent ADEM grant (pictured below) we will soon receive our own baler. Having this at our disposal will save time that was previously spent transporting the cardboard to be baled in Rainbow City. We will now be able to streamline our cardboard recycling program, enabling us to collect and process significantly more material for the upcoming year.

**City of Southside, Alabama** is in **Southside**.
September 12, 2024 ·

We are excited to announce the #CityofSouthside has received a Recycling Grant! This is wonderful for the city as we reduce the waste in landfills and decrease pollution.

(ALL BUILDINGS WERE HARDI BOARD AND BRICK EXTERIOR FINISH)
5. ZONING - THE SURVEYED PROPERTY IS ZONED R-3 - MULT-FAMILY RESIDENTIAL DISTRICT REQUIREMENTS - USE - APARTMENTS FRONT BUILDING SETBACK – 20 FEET SIDE BUILDING SETBACK – 10 FEET REAR BUILDING SETBACK – 30 FEET MAXIMUM BUILDING HEIGHT – 40 FEET MINIMUM LOT SIZE 7000 SQUARE FEET PARKING REQUIREMENTS FOR APARTMENTS - ELEVEN 1 SPACE PER DWELLING UNIT. NOTE: TOTAL NUMBER OF PARKING SPACES REQUIRED – 96
6. STREET ADDRESS FOR THE SURVEYED PROPERTY = 300 WYATT LEE DRIVE RAINBOW CITY, ALABAMA 35906
7. PROPERTY FLOOD ZONE INFORMATION - FLOOD INSURANCE RATE MAP & PANEL NUMBER 01055C0031E DATED MARCH 16, 2016. SURVEYED PROPERTY IS LOCATED IN FLOOD ZONE X (NO SHADING).
8. THE PROPERTY DESCRIPTION SHOWN ON THIS SURVEY IS THE SAME PROPERTY DESCRIBED IN OLD REPUBLIC NATIONAL TITLE INSURANCE COMPANY TITLE COMMITMENT FILE NO. GA2300867B, EFFECTIVE 11-30-2023, AT 12:18 P.M.
9. OLD REPUBLIC NATIONAL TITLE INSURANCE COMPANY TITLE COMMITMENT FILE NO. GA2300867B, EFFECTIVE 11-30-2023, AT 12:18 P.M. WAS RELIED UPON TO SHOW ALL EASEMENTS IN FAVOR OF AND OR AFFECTING THE SURVEYED PROPERTY.
10. THE SURVEYED PROPERTY HAS DIRECT ACCESS TO WYATT LEE DRIVE, WHICH IS A PUBLICLY DEDICATED ROAD RIGHT-OF-WAY AS SHOWN ON SUMMERLIN PLACE, AS RECORDED IN MAP BOOK M-98, IN THE OFFICE OF THE JUDGE OF PROBATE OF ETOWAH COUNTY, ALABAMA. THIS IS NOT AN ILLEGAL SUBDIVISION OF PROPERTY.
11. CALCULATION FOR CLOSURE IS GREATER THAN 1' : 30,000'
12. NO VISIBLE BURIAL PLOTS OR CEMETERIES WERE DISCOVERED ON THE SURVEYED PROPERTY.
13. THE SURVEYED PROPERTY IS RECORDED AS SUMMERLIN PLACE, AS RECORDED IN MAP BOOK M-98, IN THE OFFICE OF THE JUDGE OF PROBATE OF ETOWAH COUNTY, ALABAMA. THIS IS NOT AN ILLEGAL SUBDIVISION OF PROPERTY.
14. PARKING SPACES – 78 REGULAR SPOTS / 0 HANDICAP SPOTS
15. THERE ARE ENCROACHMENTS ON SURVEYED PROPERTY AS SHOWN ON THIS SURVEY.
PROPERTY DESCRIPTION
A PART OF SECTION 19, TOWNSHIP 12 SOUTH, RANGE 6 EAST, HUNTSVILLE MERIDIAN, ETOWAH COUNTY, ALABAMA, BEING MORE PARTICULARLY DESCRIBED AS COMMENCING AT A PK NAIL FOUND LOCATED AT THE SOUTHWEST CORNER OF THE NORTHWEST 1/4 OF THE SOUTHWEST 1/4 OF SAID SECTION 19; THENCE N00°03'50"E, A DISTANCE OF 1967.16 FEET TO A 1 INCH OPEN TOP PIPE; THE POINT OF BEGINNING. LEAVING THE POINT OF BEGINNING N39°49'49"E A DISTANCE OF 355.86 FEET TO A IRON SET (5/8X IRON AND ALL OTHER IRONS REFERRED TO AS "SET" ARE 1/2 INCH DIAMETER REBAR WITH A RED PLASTIC CAP STAMPED ALLEN CA-1005-LS); THENCE S54°35'58"E A DISTANCE OF 365.66 FEET TO A IRON SET, THEN CONTINUE S54°35'58"E A DISTANCE OF 60.00 FEET TO A IRON SET; THEN CONTINUE S54°35'58"E A DISTANCE OF 227.57 FEET TO A POINT, IRON SET; THEN S29°07'27"W A DISTANCE OF 480.86 FEET TO A 1/2 INCH DIAMETER REBAR WITH A YELLOW CAP STAMPED ALLEN CA-1005-LS; THEN N60°49'39"W A DISTANCE OF 55.06 FEET TO A 1/2 INCH DIAMETER REBAR WITH A YELLOW CAP STAMPED ALLEN CA-1005-LS; THEN N60°49'39"W A DISTANCE OF 54.94 FEET TO A 1/2 INCH DIAMETER REBAR WITH A YELLOW CAP STAMPED ALLEN CA-1005-LS; THEN N51°44'02"W A DISTANCE OF 55.24 FEET TO A 1/2 INCH DIAMETER REBAR WITH A YELLOW CAP STAMPED ALLEN CA-1005-LS; THEN N53°43'18"W A DISTANCE OF 68.58 FEET TO A 1/2 INCH DIAMETER REBAR WITH A YELLOW CAP STAMPED ALLEN CA-1005-LS; THEN N53°05'41"W A DISTANCE OF 31.46 FEET TO A 1 INCH DIAMETER PINCH TOP PIPE; THEN N36°48'29"W A DISTANCE OF 87.20 FEET TO A 1/2 INCH DIAMETER REBAR WITH A YELLOW CAP STAMPED TUCKER ENG LS CA-810. THEN N36°58'15"W A DISTANCE OF 257.92 FEET TO THE POINT OF BEGINNING AND CONTAINING 6.50 ACRES MORE OR LESS.
SAID PROPERTY BEING ALSO DESCRIBED AS:
A PART OF SECTION 19, TOWNSHIP 12 SOUTH, RANGE 6 EAST, HUNTSVILLE MERIDIAN, ETOWAH COUNTY, ALABAMA, BEING MORE PARTICULARLY DESCRIBED AS: LOT 3 OF SUMMERLIN PLACE SUBDIVISION ACCORDING TO THAT CERTAIN PLAT PREPARED BY ALLEN LAND SURVEYING, BRANDON ALLEN, P.L.S. #31826, DATED AUGUST 24, 2023, AND RECORDED SEPTEMBER 14, 2023, AT PLAT BOOK M, PAGE 98, IN THE PROBATE OFFICE OF ETOWAH COUNTY, ALABAMA.
TOGETHER WITH AN EASEMENT FOR ACCESS, DRAINAGE AND UTILITIES PURSUANT TO ACCESS, DRAINAGE AND UTILITIES EASEMENT AGREEMENT BY AND BETWEEN WILLIAM GREGORY SUMMERLIN AND WYATT LEE MEADOWS, LP, AN ALABAMA LIMITED PARTNERSHIP DATED OCTOBER 25, 2023 AND RECORDED OCTOBER 26, 2023 IN INSTRUMENT NUMBER 356545, IN THE OFFICE OF THE JUDGE OF PROBATE COURT OF ETOWAH COUNTY, ALABAMA.
TITLE EXCEPTIONS
OLD REPUBLIC NATIONAL TITLE INSURANCE COMPANY TITLE COMMITMENT FILE NO. GA2300867B, EFFECTIVE 11-14-2023, SCHEDULE B II EXCEPTIONS:
5. THE FOLLOWING MATTERS SHOWN ON SURVEY BY ALLEN LAND SURVEYING, LLC, BRANDON ALLEN, ALABAMA P.L.S. 31826, DATED AUGUST 11, 2022, LAST REVISED 11-27-2023 ("SURVEY")
A. EXISTING ASPHALT ROAD LYING WITHIN PART OF THE 68-FOOT WIDE RIGHT-OF-WAY/INGRESS EGRESS EASEMENT; AND (POST CONSTRUCTION OF WYATT LEE DRIVE THIS EXISTING ASPHALT DRIVE HAS BEEN DEPICTED AND IS NOW A DEDICATED CITY RIGHT OF WAY.)
B. ENCROACHMENTS OF ASPHALT PARKING LOT OVER THE SOUTHEAST BOUNDARY.
12. RIGHT OF WAY TO ALABAMA POWER COMPANY AS RECORDED IN BOOK 1333, PAGE 289; BOOK 0-0, PAGE 271; AND BOOK 398, PAGE 379. (ALL BEING BLANKET DESCRIPTIONS IN NATURE - AFFECTS THE SURVEYED PROPERTY)
13. EASEMENT IN FAVOR OF THE CITY OF RAINBOW CITY AS RECORDED IN BOOK 1802, PAGE 98. (AS PLOTTED - AFFECTS THE SURVEYED PROPERTY)
14. EASEMENTS AS DESCRIBED IN THAT DEED RECORDED IN BOOK 1372, PAGE 56. (AS PLOTTED - AFFECTS THE SURVEYED PROPERTY)
15. EASEMENTS AND RESERVATIONS AS RECORDED IN BOOK 365, PAGE 229. (A BLANKET DESCRIPTION IN NATURE - AFFECTS THE SURVEYED PROPERTY)
16. PIPELINE EASEMENT RECORDED IN BOOK 425, PAGE 384. (A BLANKET DESCRIPTION IN NATURE - AFFECTS THE SURVEYED PROPERTY)
17. TERMS AND CONDITIONS OF ACCESS, DRAINAGE AND UTILITIES AGREEMENT AS RECORDED IN INSTRUMENT NO. 356544; THE EASEMENTS CREATED BY SAME BEING SHOWN ON PLAT RECORDED IN PLAT BOOK M, PAGE 98. (AS PLOTTED - AFFECTS THE SURVEYED PROPERTY).

# OUTFALL RECONNAISSANCE INVENTORY FIELD SHEET

## Section 1: Background Data

| | | | |
|---|---|---|---|
| Drainage Basin: Drainage Zone 1 | | Outfall ID: Z1-015 | |
| Today's Date: 3/12/2025 | | Time (Military): 1328 | |
| Investigators: E. Kennedy and J. Jayroe | | Form completed by: E. Kennedy | |
| Temperature (°F): 72 | Rainfall (in.): Last 24 hours: 0 | Last 48 hours: 0 | |
| Latitude: 33.985078 | Longitude: -86.044079 | GPS Unit: Trimble Geo 7X | GPS LMK #: NA |
| Camera: Apple iPhone 14pro | | Photo #s: one photo attached | |

Land Use in Outfall Drainage Area (Check all that apply):

| | |
|---|---|
| ☐ Industrial | ☑ Open Space |
| ☐ Urban Residential | ☐ Institutional |
| ☐ Suburban Residential | Other: _____ |
| ☑ Commercial | Known Industries: _____ |

Notes (e.g.., origin of outfall, if known):

Conveyance of stormwater along Sutton Street and gas station parking lot.

## Section 2: Outfall Description

| LOCATION | MATERIAL | SHAPE | | DIMENSIONS (IN.) | SUBMERGED |
|---|---|---|---|---|---|
| ☑ **Closed Pipe** | ☑ RCP ☐ CMP<br>☐ PVC ☐ HDPE<br>☐ Steel<br>☐ Other: _____ | ☑ Circular<br>☐ Elliptical<br>☐ Box<br>☐ Other: _____ | ☑ Single<br>☐ Double<br>☐ Triple<br>☐ Other: _____ | Diameter/Dimensions:<br>15" | In Water:<br>☑ No<br>☐ Partially<br>☐ Fully<br>With Sediment:<br>☐ No<br>☑ Partially<br>☐ Fully |
| ☐ **Open drainage** | ☐ Concrete<br>☐ Earthen<br>☐ Rip-rap<br>☐ Other: _____ | ☐ Trapezoid<br>☐ Parabolic<br>☐ Other: _____ | | Depth: _____<br>Top Width: _____<br>Bottom Width: _____ | |
| ☐ **In-Stream** | **(applicable when collecting samples)** | | | | |
| **Flow Present?** | ☐ Yes ☑ No | ***If No, Skip to Section 5*** | | | |
| **Flow Description (If present)** | ☐ Trickle ☐ Moderate ☐ Substantial | | | | |

## Section 3: Quantitative Characterization

| FIELD DATA FOR FLOWING OUTFALLS | | | | |
|---|---|---|---|---|
| **PARAMETER** | | **RESULT** | **UNIT** | **EQUIPMENT** |
| ☐Flow Method #1 | Volume | | Liter | Bottle |
| | Time to fill | | Seconds | Stop watch |
| ☐Flow Method #2 | Flow depth | | Inches | Tape measure |
| | Flow width | _____' _____" | Ft, In | Tape measure |
| | Measured length | _____' _____" | Ft, In | Tape measure |
| | Time of travel | | Seconds | Stop watch |
| Temperature | | | °F | Thermometer |
| pH | | | pH Standard Units | Test strip / probe |
| Ammonia | | | mg/L | Test strip |

# OUTFALL RECONNAISSANCE INVENTORY FIELD SHEET (CONTINUED)

## Section 4: Physical Indicators for Flowing Outfalls Only

Are Any Physical Indicators Present in the flow? ☐ Yes ☐ No *(If No, Skip to Section 5)*

| INDICATOR | CHECK if Present | DESCRIPTION | RELATIVE SEVERITY INDEX (1-3) | | |
|---|---|---|---|---|---|
| Odor | ☐ | ☐ Sewage ☐ Rancid/sour ☐ Petroleum/gas ☐ Sulfide ☐ Other: | ☐ 1 – Faint | ☐ 2 – Easily detected | ☐ 3 – Noticeable from a distance |
| Color | ☐ | ☐ Clear ☐ Brown ☐ Gray ☐ Yellow ☐ Green ☐ Orange ☐ Red ☐ Other: | ☐ 1 – Faint colors in sample bottle | ☐ 2 – Clearly visible in sample bottle | ☐ 3 – Clearly visible in outfall flow |
| Turbidity | ☐ | See severity | ☐ 1 – Slight cloudiness | ☐ 2 – Cloudy | ☐ 3 – Opaque |
| Floatables -Does Not Include Trash!! | ☐ | ☐ Sewage (toilet paper, etc.) ☐ Suds ☐ Petroleum (oil sheen) ☐ Other: | ☐ 1 – Few/slight; Origin not obvious | ☐ 2 – Some; Indications of origin (e.g., possible suds or oil sheen) | ☐ 3 – Some; Origin clear (e.g., obvious oil sheen, suds, or floating sanitary materials) |

## Section 5: Physical Indicators for Both Flowing and Non-Flowing Outfalls

Are physical indicators that are not related to flow present? ☐ Yes ☑ No *(If No, Skip to Section 6)*

| INDICATOR | CHECK if Present | DESCRIPTION | COMMENTS |
|---|---|---|---|
| Outfall Damage | ☐ | ☐ Spalling, Cracking or Chipping ☐ Peeling Paint ☐ Corrosion | |
| Deposits/Stains | ☐ | ☐ Oil ☐ Flow Line ☐ Paint ☐ Other: | |
| Abnormal Vegetation | ☐ | ☐ Excessive ☐ Inhibited | |
| Poor pool quality | ☐ | ☐ Odors ☐ Colors ☐ Floatables ☐ Oil Sheen ☐ Suds ☐ Excessive Algae ☐ Other: | |
| Pipe benthic growth | ☐ | ☐ Brown ☐ Orange ☐ Green ☐ Other: | |

## Section 6: Overall Outfall Characterization

☑ Unlikely ☐ Potential (presence of two or more indicators) ☐ Suspect (one or more indicators with a severity of 3) ☐ Obvious

## Section 7: Data Collection

| | | | | |
|---|---|---|---|---|
| 1. | Sample for the lab? | ☐ Yes | ☑ No | If Yes, what time was the sample collected? |
| 2. | If yes, collected from: | ☐ Flow | ☐ Pool | |
| 3. | Intermittent flow trap set? | ☐ Yes | ☑ No | If Yes, type: ☐ OBM ☐ Caulk dam |

## Section 8: Any Non-Illicit Discharge Concerns (e.g., trash or needed infrastructure repairs)?

Outfall was full of trash and debris.

Date: 3/12/2025

1

# MS4 Background

2

# What is an MS4?

- **M**unicipal **S**eparate **S**torm **S**ewer **S**ystem
- An MS4 is a system of conveyances that is:
  - Owned by a state, city, or other public entity
  - Designed or used to collect or convey storm water
  - Not a combined sewer
  - Not part of a Publicly Owned Treatment Works

3

# Why does the MS4 program exist?

- National Pollutant Discharge Elimination System (NPDES)
- Storm Water Phase II Final Rule issued by the USEPA in 1999
- Municipal conveyances collect pollutants from users within the city
- Cities have the ability to regulate at the local level
- Addresses pollutants at their source

4

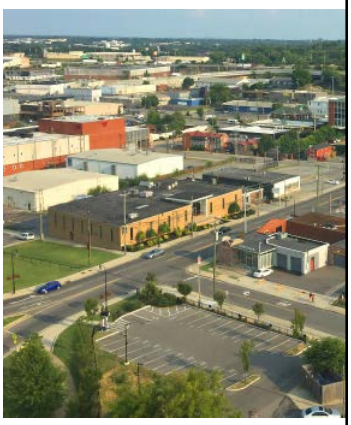
## Common MS4 Pollutants

- Oil and grease from roadways
- Pesticides and fertilizers from lawns
- Sediment from construction sites
- Trash (cigarette butts, paper wrappers, plastic bottles)

5

MS4

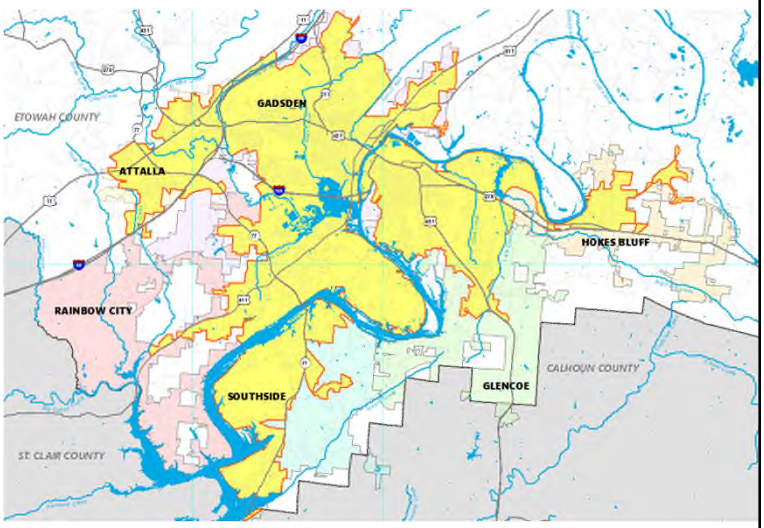
## Urbanized Area



6

# 2010 Urbanized Area Definition

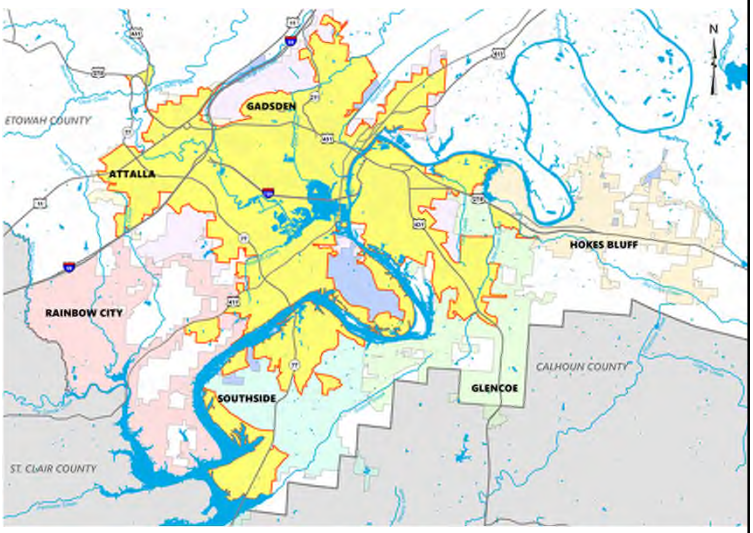
- Defined by the US Census Bureau
- **Urbanized area**
  Minimum population of 50,000
- **Core blocks**
  1,000 people/sq mi
- **Surrounding blocks**
  500 people/sq mi
- 497 Urbanized Areas in 2010 Census



7

# 2020 Census Changes

- **Urban area**
  Minimum population of 5,000 or 2,000 HUs
- **High-density nucleus**
  1,275 HUs/sq mi
- **Initial urban core**
  425 HUs/sq mi
- **Remainder of urban area**
  200 HUs/sq mi
- 2,613 urban areas in 2020 census



8

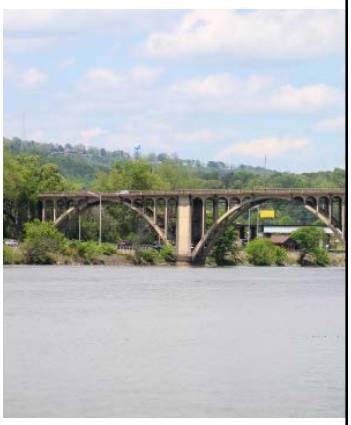
# Final Phase II Rule Clarification

- New urban area maps released in December 2022
- Significant differences in boundaries from 2010 maps
- EPA signed the *NPDES Small MS4 Urbanized Area Clarification* on June 7, 2023
- Replaces the term ‘‘urbanized area’’ with the phrase ‘‘urban areas with a population of at least 50,000’’
- Does not address the issue of map changes
- **ADEM is still relying on the 2010 maps**

9

MS4

# Impaired Waterbodies



10

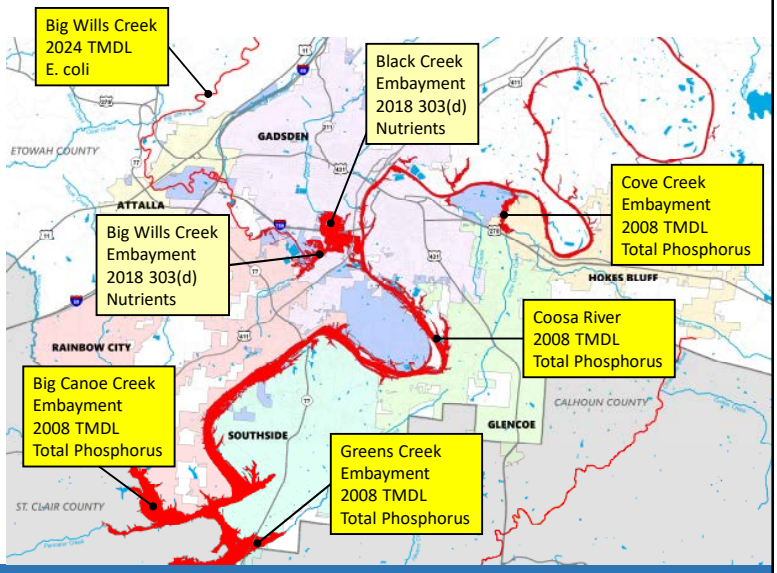
# Impaired Waterbodies

- "**Impaired**" means the waterbody cannot be used for its designated purpose
- "**303(d)**" is a list published every two years identifying impaired waters
- "**Total Maximum Daily Load**" is the maximum amount of a pollutant that a body of water can receive while still meeting water quality standards

11

# Impaired Waterbodies

- Neely Henry Lake/ Coosa River
- Big Wills Creek
- Embayments:
  - Big Wills Creek
  - Black Creek
  - Big Canoe Creek
  - Cove Creek
  - Greens Creek



12

# Neely Henry Impairments

- Neely Henry Lake is the primary receiving water for the Gadsden-Etowah MS4
- Neely Henry Lake first identified on the **1996 303(d) list** as being impaired
- Black Creek and Big Wills Creek embayments added to **2018 303(d) list**

13

# Neely Henry Impairments

- Nutrients
- pH
- Organic Enrichment
- Priority Organics (PCBs)

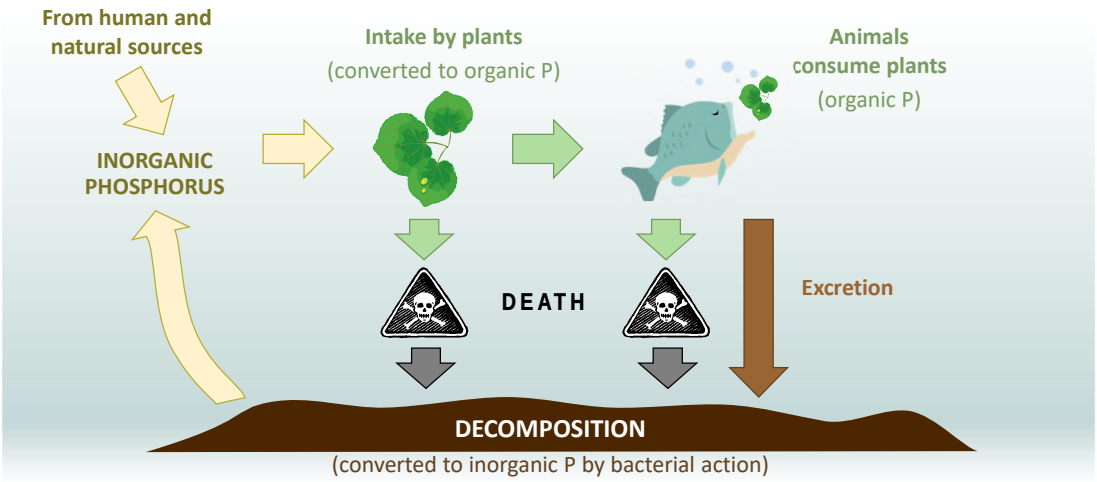
14

# Neely Henry Total Maximum Daily Load

- TMDL established in 2008 for Nutrients and Dissolved Oxygen
- Specific distribution of discharges unknown
- How much from existing non-point sources?
- How much from MS4?
- Each MS4 in the urbanized area is required to achieve a **30% reduction in Total Phosphorus** discharge loading.

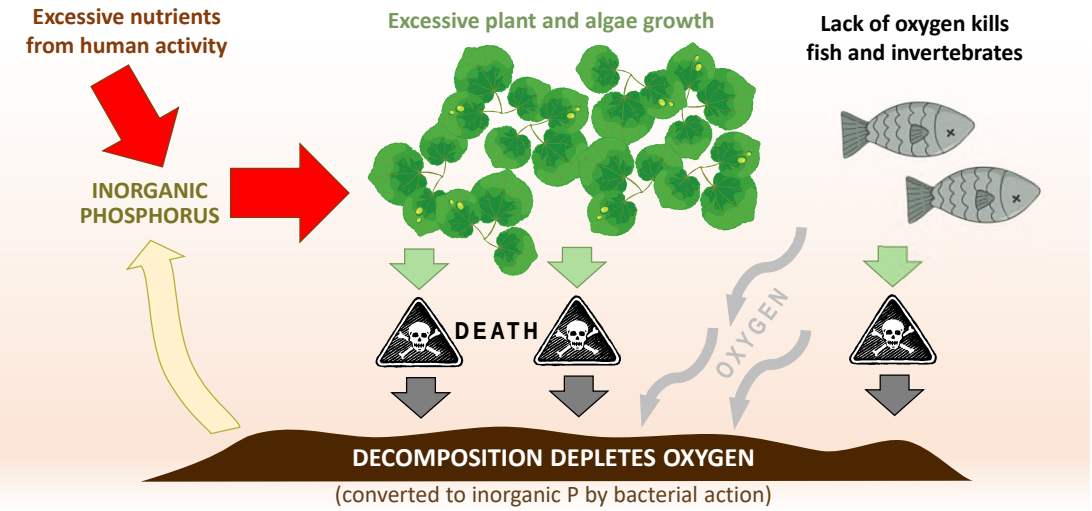
15

# Aquatic Phosphorus Cycle



16

# Eutrophication



17

# Sources of Phosphorus

- Construction runoff
- Lawn fertilizer
- Industrial sources
- Sanitary sewer overflows
- Failing septic systems
- Failing sewer infrastructure
- Cropland and pasture

18

# Big Wills Creek Impairments

- Receives storm water from Attalla, Gadsden, and Rainbow City
- Big Wills Creek first identified on the **2018 303(d) list** as being impaired for pathogens
- Public health impacts
- E. coli can cause illness in people exposed to contaminated storm water

19

# Big Wills Creek Total Maximum Daily Load

- TMDL established in August 2024 for E. coli
- Only applies to MS4s discharging to Big Wills Creek
- The Attalla MS4, Gadsden MS4, and Etowah County MS4 are each required to achieve a **96% reduction in E. coli** discharge loading.

20

# Pathogen Impacts

- Public health impacts
- E. coli can cause illness in people exposed to contaminated storm water
- Common symptoms include fever, vomiting, and diarrhea
- Elderly people and children are most vulnerable

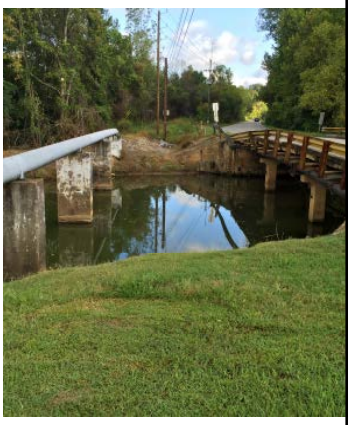
21

# Sources of Pathogens

- Animal feeding operations
- Pasture grazing
- Collection system failure:
  - Failing septic systems
  - Sanitary sewer overflows
  - Aging sewer infrastructure

22

# MS4 Implementation



23

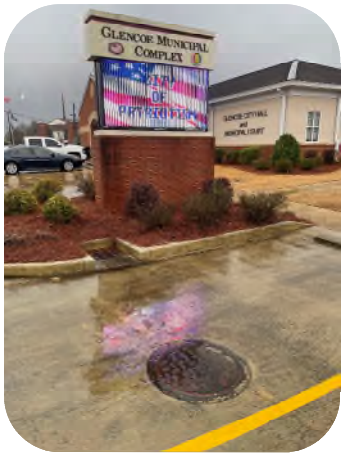
## SWMPP

- Storm Water Management Program Plan
- Required by Part III of the Phase II General Permit
- Details the steps the permittee will take to implement the permit requirements
- SWMPPs revised in **February 2025**

24

# 5 Minimum Control Measures

1. Public Education, Outreach, Participation, and Involvement
2. **Illicit Discharge Detection and Elimination**
3. Construction Site Runoff Control
4. Post Construction Runoff Control
5. **Pollution Prevention/Good Housekeeping for Municipal Operations**



25

# Required Municipal Training

- Pollution prevention
- Petroleum and chemical storage
- Waste management
- Illicit discharge identification
- Common illicit discharges
- Standard Operating Procedures

26

MS4

# Pollution Prevention

27

## Standard Operating Procedures

- Written SOPs are required by the MS4 permit
- Must detail good housekeeping practices for municipal facilities and operations
- Assess facilities and activities to determine pollution potential
- SOPs must be reviewed annually and updated if needed

28

# Vehicle Washing

29

## Pollutants from Vehicle Washing

- Pollutants include detergents, oils, grease, grit, and heavy metals
- Soap can harm fish and other aquatic life
- Phosphates in detergent can contribute to algae blooms
- As the algae decays, the process uses up oxygen, killing fish

30

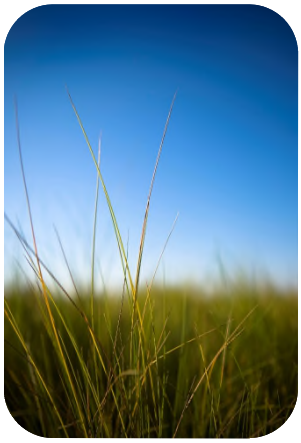
# Control Vehicle Washing Discharges

- Only wash vehicles in designated areas
- **Do not direct the wash water to a storm sewer or waterbody!**
- Sanitary sewer is the best method of wash water disposal
- Commercial car washes have pre-treatment and sanitary sewer connections
- Commercial facilities use less water

31

# Control Vehicle Washing Discharges

- If no sanitary connection is available, wash vehicles on grass or gravel
- If washing must take place on pavement, direct flows to grassed areas
- Infiltration will help remove pollutants
- **Do not wash undercarriage**



32

# Inlet Protection – Filter Booms

- Placed in front of a curb inlet or around a grate inlet to intercept flows
- Oil sorbent
- Sufficient capacity to retain grit and sediment from a minimum of one week's washing activity

Image Credit: New Pig Corporation

33

# Filter Boom Maintenance

- Inspect booms prior to washing and at least once per week.
- Remove grit and sediment when accumulations reach 50% of the height of the roll.
- Dispose of the removed material in the trash.
- Oil sorbent booms will be replaced when saturated or according to the manufacture's recommendations.

34

# Inlet Protection – Inlet Bags or Skimmers

- Placed inside an inlet catch basin to capture pollutants
- Oil sorbent
- Sufficient capacity to retain grit and sediment from a minimum of one week's washing activity

Image Credit: Dandy

Image Credit: BMP Supplies

35

# Inlet Bag or Skimmer Maintenance

- Inspect catch basin BMPs prior to washing and at least once per week.
- Remove grit and sediment when accumulations reach 50% of the capacity of the inlet bag.
- Dispose of the removed material in the trash.
- Oil sorbent bags or skimmers will be replaced when saturated or according to the manufacture's recommendations.

36

# “Eco-friendly” Cleaners

- **Biodegradable** soaps break down quicker
- **Phosphate-free** soaps don’t contain phosphorus compounds
- Doesn’t help with the solids and oils washed off the vehicle
- Still need to direct flows to grass

37

# Paint and Paint Waste

38

## Pollutants from Paint and Paint Waste

- Water-based paints contain solid pigments that increase turbidity
- Water-based paints may also contain surfactants and thickeners
- Oil-based paint contains petroleum distillates and organic solvents
- Some paints may contain heavy metals
- Organic solvents used to clean oil-based paint from brushes and equipment are toxic

39

## Paint and Paint Waste Storage

- Store paint and paint waste **indoors**, away from storm water
- Paint and paint waste containers should remain closed when not in use
- Clearly label containers to avoid confusion

40

# Equipment Cleaning

- Water-based paint brushes and equipment may be washed in a sink discharging to the sanitary sewer
- Oil-based paints and cleaning solvents must be containerized for disposal
- Never rinse brushes or paint containers into the street, gutter, or storm drain

41

# Petroleum Management

42

# Petroleum Pollutants

- Oil contains toxic components such as benzene
- Used oil can contain heavy metals
- One gallon of gasoline can contaminate approximately 750,000 gallons of water
- Oil poured down the drain can damage the wastewater treatment plant

43

# Petroleum Storage

- Spill containment dikes must contain **110%** of the capacity of the **largest tank**
- Must be impervious construction
- Not concrete block, unless sealed or lined
- Concrete curbs are also protective for small spills
- Storm water must be inspected prior to discharge

44

# Used Oil Management

- Must be sent for recycling
- EPA ID numbers are required for facilities generating more than **25 gallons** of used oil per month
- Store used oil indoors
- Store used oil away from doors and aisles
- Use **closed containers**
- Clearly label used oil containers

45

# Equipment Storage

- Store equipment under roof if possible
- Inspect floor or ground for staining
- Keep driving paths clear
- Move chemicals and oil away from doors or openings

46

# Vehicle Maintenance

- Inspect parking areas for leaks or spills
- Identify leaking vehicles
- Repair vehicles promptly
- Clean up spills

47

# Fueling Operations

- Spills can occur during fueling
- Do not “top off”
- Stay with vehicle while fueling
- Clean up any drips or spills
- Carry spill kits on municipal vehicles

48

# Fueling Area Inspections

- Look for evidence of small spills
- Inspect pump and piping
- **Staining** on the pavement or gravel
- Physical **damage or deterioration**
- Leaks or drips
- Cracking or abnormal wear

49

# Spill Clean Up

- **Do NOT use water to wash away spills**
- Use absorbent materials
- Dispose of materials properly when finished cleaning
- Under 25 gallons, no free liquids, can go to a lined landfill

50

# Spill Reporting

- Reportable quantity for the release of oil into the environment, excluding water, is an amount of **25 gallons or more**
- **Any release of oil into water must be reported**
- During normal office hours:
  ADEM Birmingham Field Office
  205-942-6168
- After hours:
  Alabama State Warning Point
  1-800-843-0699

51

# Scrap Tire Management

52

# Scrap Tire Management

- Government operations that generate **10 or more scrap tires** per year are Class Two Receivers
- Existing receivers had to re-register by February 9, 2025
- Renew registration every 3 years
- Semi-annual reporting by July 28 and January 28
- Maintain an operating record

53

# Scrap Tire Outdoor Storage

- Storage **limit of 300** scrap tires total (indoor or outdoor)
- No scrap tires may be exposed to the elements for more than **30 days**
- If exposed more than 7 days, receiver must have a **Vector Control Plan**
- Written plan must be approved by ADEM

54

# Scrap Tire Outdoor Storage

- Limits on pile size
- Do not store tires in the 100-year floodplain
- Do not store tires **within 200 feet** of a waterbody or wetland
- Provide a 100-foot fire lane around piles
- Space piles 50 feet apart

55

# Scrap Tire Emergency Planning

- Arrange for fire protection
- Submit documentation of fire arrangements to ADEM
- Prepare an Emergency Response Plan
- Construct a berm around tire piles to detain runoff from a tire fire
- No open flames within 25 feet of a tire pile

56

# PHF Management

57

## Fertilizers

- Fertilizers contain phosphorus or nitrogen
- Fertilizers contribute to dense vegetation growth in waterbodies (eutrophication)
- Decomposition of vegetation uses oxygen
- Lack of oxygen in waterbodies can kill fish and invertebrates

58

# Pesticides

- Pesticides are used to address adult mosquitos, mosquito larvae, wasps, bees, fire ants, and rats
- Pesticides can be harmful to aquatic life and can contaminate drinking water

59

# Pesticides

- Pyrethroids are synthetic insecticides
- Found in products for ant control; home lawn, garden, and landscape care; and structural pest control
- Found in mosquito control products
- Toxic to invertebrates and fish
- Highly toxic to bees

60

# Herbicides

- Herbicides used to prevent regrowth in ditches
- Herbicides used in cemeteries and parks
- Aquatic herbicides used to control algae growth
- Herbicides can be toxic to fish and other aquatic life

61

# ADEM PHF Permit Use Thresholds

- **Mosquitos:** 6,400 acres of treatment area
- **Weed and Algae:** 100 surface acres of water or 100 linear miles at water's edge
- **Animal Pest Control:** 100 surface acres of water or 100 linear miles at water's edge
- **Forest Canopy:** 6,400 acres of treatment area
- Permit is not required if application is below the use threshold

62

# PHF Usage Best Practices

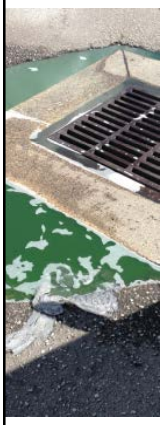
- Don’t over-apply
- Check the weather - **don’t spray before a rain event**
- Follow manufacture’s recommendations for water setbacks
- Transfer or pour chemicals indoors, over impervious surfaces

63

# PHF Storage and Disposal Best Practices

- Inspect storage areas of leaks or spills
- Containers must be labeled
- Dispose of damaged containers
- Keep containers closed when not in use
- Dispose of old, unusable, or obsolete chemicals
- Don’t dump grass clippings into storm drains or waterways

64



# MS4 Illicit Discharges

65

## What Are Illicit Discharges?

- Not authorized by NPDES permit
- Not authorized by ordinance
- Three types:
  - Continuous – constant flow
  - Intermittent – off and on
  - Transitory – one and done

66

# Common Illicit Discharges

- Sewage – leaking or overflow
- Illegal dumping into storm drains
- Construction sites – paint, oil, sediment
- Unpermitted industrial discharges
- Swimming pools – chlorinated or saltwater

67

# Signs of an Illicit Discharge

- Staining at inlets or in culverts
- Dry-weather flow
- Odor
- Sheen
- Foam

68

# Illicit Discharge Detection

- **Outfall Reconnaissance Inventory**
- Visually inspect outfalls
- Record observations
- Perform field screening
- Collect samples

69

# Illicit Discharge Reporting and Tracking

- Public reporting
- Municipal employee reporting
- Report must include location, date, time, and a brief description at a minimum
- Track reports in GIS or on map as part of outfall screening program

70

# Illicit Discharge Elimination

- Trace sources using the storm system map and field inspection
- Pursue compliance
- Report unpermitted facilities to ADEM
- Fix leaks as soon as possible
- Public education
- Community collection days

71

MS4

## Recognizing Illicit

72

# Oil or Fuels

- **Color:** Rainbow sheen floating on top of water surface; water may be gray or milky
- Dark staining of surrounding surfaces may be present
- When disturbed, sheen will swirl together
- **Odor:** May have strong petroleum or gasoline smell
- **Turbidity and Floatables:** Oil sheen, red, brown, black streaks

73

# Oil or Fuels

74

# Oil or Fuels

75

# Oil or Fuels

76

# Oil or Fuels

77

# Sewage

- **Color:** Gray
- **Odor:** Strong sewage smell, sulfur, fecal matter
- **Turbidity and Floatables:** Foam, bubbles, fecal solids, food wastes, toilet paper, etc.

**Report observed SSOs**

78

# Sewage

79

# Sewage

80

# Sewage

81

# Sewage

82

# Sediment

- **Color:** Orange, yellow, red, chocolate milk
- **Odor:** None
- **Turbidity and Floatables:** Typically find deposits settled to bottom, water can be very turbid, may not be able to see bottom of stream

83

# Sediment

84

# Sediment

85

# Sediment

86

# Sediment

87

# Sediment

88

## Soaps and Detergents

- **Color:** Milky white, grey, cloudy
- **Odor:** Fragrance like laundry detergent or soap, or none at all
- **Turbidity and Floatables:** Bubbles, foam, highly turbid

89

## Soaps and Detergents

90

# Soaps and Detergents

91

# Soaps and Detergents

92

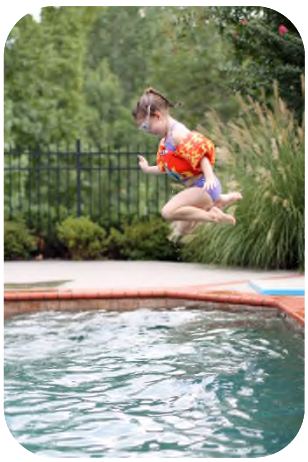
# Swimming Pool Discharges

- Swimming pool discharges are authorized, provided they are:
  - pH neutral
  - Dechlorinated (less than 1 ppm of chlorine)
- Best practice is to discharge the pool water over a grassed surface to infiltrate
- Saltwater swimming pools should be discharged to the sanitary sewer **with prior approval** from the utility

93

# Swimming Pool Discharges

- **Color:** None
- **Odor:** Chlorine or none at all
- **Turbidity and Floatables:** None
- Swimming pool discharges are distinguishable by location
- An observed swimming pool discharge should be reported



94

## Iron Bacteria

### Not an illicit discharge!

- **Color:** Red, reddish-orange, slimy, fuzzy
- **Odor:** Rotten, swampy, or none at all
- **Turbidity and Floatables:** Oily sheen that breaks apart when disturbed, "crumbs" settled on the bottom

95

## Iron Bacteria

- The red or orange deposits are caused by bacteria that feed on dissolved iron
- The bacteria colonize the transition zone where deoxygenated water flows into oxygenated water
- The iron-oxide deposits settle to the bottom or remain suspended in the slime
- Iron bacteria are naturally-occurring and not harmful

96

# Iron Bacteria

97

# Iron Bacteria

98

# Iron Bacteria

99

# Iron Bacteria

100

# Iron Bacteria

101

# Illicit Discharge Reporting

- Observed illicit discharges should be immediately reported to your supervisor
- Supervisors should report to one of the following:

| City | Report To | Phone | Email |
|---|---|---|---|
| Attalla | Jason Nicholson | 256-441-9200 | jnicholson@attallacity.org |
| Glencoe | Todd Means | 256-492-1424 x 5 | toddmeans@cityofglencoe.org |
| Hokes Bluff | Lisa Lowman | 256-492-2414 x 6 | lisa.lowman@cityofhokesbluff.com |
| Rainbow City | Joel Garmon | 256-413-1230 | jgarmon@rbcalabama.com |
| Southside | Judd Rich | 256-442-9775 x 131 | juddrich@cityofsouthside.com |

102

# Illicit Discharge Reporting

- The report should contain the following information:
  - Date
  - Time
  - Location
  - Observed characteristics (e.g., odor, color, sheen, etc.)
- You are **NOT** required to investigate
- Just report what you observed

103

# STORMWATER FACILITY
# MAINTENANCE AGREEMENT

THIS AGREEMENT, made and entered into this day of _____, _____, by and between _____, acting by and through _____, hereinafter referred to as "Landowner", and the City of Rainbow City, AL, hereinafter referred to as "City".

WITNESSETH

WHEREAS, the Landowner is the owner of certain real property described as an approximately _____ acre tract located in the City of Rainbow City, Alabama, according to the deed recorded as document number _____, Deed Records, Etowah County, Alabama, hereinafter called the "Property".

WHEREAS, the Landowner is proceeding to build on and develop the Property according to the Site Plan/Subdivision Plan known as _____ hereinafter called the "Plan", which is expressly made a part hereof, as approved or to be approved by the City and the Landowner provides for management of storm water within the confines of the Property; and

WHEREAS, the City and the Landowner, and their successors and assigns, agree that the health, safety and welfare of the residents of the City of Rainbow City, Alabama, require that on-site Stormwater Management Facilities be constructed and maintained on a portion of the Property; and

WHEREAS, the City requires that on-site Stormwater Management Facilities ("Facility") as shown on the Plan be constructed and adequately maintained by the Landowner, its successors and assigns, the location and dimensions of which is shown and

more particularly described by metes and bounds in the attached Exhibit "A" ("Facility Property"); and

NOW, THEREFORE, in consideration of the foregoing premises, the mutual covenants contained herein, and the following terms and conditions, the parties hereto agree as follows:

1. The Landowner, its successors and assigns, shall adequately construct and maintain the on-site Stormwater Management Facility ("Facility") at no expense to the City of Rainbow City in accordance with the design specifications for the Facility, attached as Exhibit "B", and the current standards then in force and effect in the City of Rainbow City and with the Operations and Maintenance Plan attached to this Agreement as Exhibit "C". The Stormwater Facility includes all pipes, channels or other conveyances built to convey Stormwater to the facility, as well as all structures, improvements, and vegetation provided to control the quantity and quality of the Stormwater. Adequate maintenance is herein defined as good working condition so that these facilities are performing their design functions. The Stormwater Structural Control Maintenance Checklists, attached to this Agreement as Exhibit "D", are to be used to establish what good working condition is acceptable to the City.
2. The Landowner, its successors and assigns, shall inspect the Facility and submit an inspection report to the City annually. The purpose of the inspection is to assure safe and proper functioning of the Facility. The inspection shall cover the entire Facility, berms, outlet structure, pond areas, access roads, etc. Components of the Facility, which need maintenance or replacement to perform their design function, shall be noted in the inspection report along with the corrective actions to be taken.
3. The Landowner, its successors and assigns, hereby grant permission to the City, its authorized agents and employees, to enter upon the Property and to inspect the Facility Property whenever the City deems necessary. The purpose

of inspection is to follow-up on reported deficiencies and/or to respond to citizen complaints. The City shall provide the Landowner, its successors and assigns, copies of the inspection findings and a directive to commence with the repairs if necessary.

**4.** In the event the Landowner, its successors and assigns, fails to maintain the Facility in good working condition as specified herein, the City, its authorized agents and employees, may enter upon the Facility Property and take whatever steps necessary to correct deficiencies identified in the inspection report and to charge the costs of such repairs to the Landowner, its successors and assigns**. It is expressly understood and agreed that the City is under no obligation to routinely maintain or repair said Facility, and in no event shall this Agreement be construed to impose any such obligation on the City, as such obligation is Landowner's.**

5. The Landowner, its successors and assigns, will perform the work necessary to keep the Facility in good working order as appropriate. In the event the City pursuant to this Agreement, performs work of any nature, or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like, the Landowner, its successors and assigns, shall reimburse the City upon demand, within thirty (30) days of receipt thereof for all actual costs incurred by the City hereunder. In the event that Landowner or its successors or assigns fail to pay the City for the costs incurred under this section, the City shall impress a lien for the costs of such work upon other lots owned by the Landowner. Such lien shall be perfected by filing in the office of the Probate Judge of Etowah County, Alabama, an affidavit identifying the property to be charged with such lien, stating the amount thereof, and making reference to this Agreement.

6. This Agreement imposes no liability of any kind whatsoever on the City. **THE LANDOWNER AGREES TO HOLD THE CITY HARMLESS FROM ANY LIABILITY IN THE EVENT THE FACILITY FAILS TO OPERATE PROPERLY. LANDOWNER COVENANTS AND AGREES AND DOES HEREBY AGREE TO INDEMNIFY, HOLD HARMLESS**

**AND DEFEND THE CITY OF RAINBOW CITY, ITS AGENTS, SERVANTS AND EMPLOYEES FROM AND AGAINST ALL COSTS, EXPENSES, LOSSES, DAMAGES, CLAIMS OR CAUSES OF ACTION WHATSOEVER ARISING, OR WHICH MIGHT ARISE, FROM THE FAILURE OF LANDOWNER OR ANY FUTURE OWNERS OF THE ABOVE FACILITITY PROPERTY TO MAINTAIN THE FACILITY, INCLUDING, BUT NOT LIMITED TO THE BED AND BANKS OF THE DETENTION POND; ANY DAMAGES CAUSED TO PERSON OR PROPERTY DUE TO (1) FLOODING OF THE POND AND ITS BANKS, (2) SLOPE FAILURE OF THE BANKS OF THE POND, OR (3) FAILURE OF THE POND OR ITS BANKS TO OPERATE IN A MANNER CONSISTENT WITH CITY OF RAINBOW CITY CRITERIA TO PERFORM ANY OTHER DUTIES OR OBLIGATIONS HEREUNDER.**

7. Landowner covenants and agrees that no habitable building shall be erected within the drainage easement outlined on Exhibit "A" but this paragraph shall not preclude construction of other improvements within the drainage easement, which do not impede drainage. Landowner covenants and agrees that no habitable building shall be erected on the above property abutting such easement which shall have a finished floor at an elevation less than two feet above the maximum depth of water in the detention pond which would occur during a 100 year frequency flood.

8. This Agreement shall be recorded among the land records of Etowah County, Alabama, shall constitute a covenant running with the land, and shall be binding on the Landowner, its administrators, executors, assigns, heirs and any other successors in interests, including any property owners' association.

**EXHIBIT "A"**

INSERT LEGAL DESCRIPTION

## Exhibit "C"

## CITY OF RAINBOW CITY STORMWATER FACILITY OPERATION AND MAINTENANCE PLAN

The only responsibility the City of Rainbow City has in the operation and maintenance of this Facility is inspection.

**General Maintenance Procedures**

The structural and functional integrity of the Facility shall be maintained at all times by removing and preventing drainage interference, obstructions, blockages, or other adverse effects into, through, or out of the system.

Periodic silt removal shall occur when standing water conditions occur or the pond's storage volume is reduced by more than 10%. Silt shall be removed and the pond/basin returned to original lines and grades shown on the approved engineering plans. In addition, corrective measures are required any time a basin does not drain completely within 72 hours of cessation of inflow. NO STANDING WATER IS ALLOWED in basins designed for dry detention purposes.

Accumulated litter, sediment, and debris shall be removed every 6 months or as necessary to maintain proper operation of the basin. Disposal shall be in accordance with federal, state and local regulations.

Detention facilities shall be mowed monthly between the months of April and October or anytime vegetation exceeds 12-inches in height.

To prevent debris from entering and clogging the downstream storm sewer system a wire mesh screen or similar screening device shall be installed over the outlet until final acceptance.

### 4. PREVENTIVE MAINTENANCE/INSPECTION

- Visual inspections of all components will be conducted every 6 months.
- A log shall be kept of maintenance actions, and inspections. The log should document the condition of the detention system's primary components, mowing, and silt, litter and debris removal dates. Document aeration of the basin bottoms and replanting to prevent the sealing of the basin bottom.
- **Written maintenance and repair records shall be maintained by the party or parties signing the attached Agreement and shall be provided to the City upon request.**

# Appendix H – Pollution Prevention for Municipal Operations

# List – Property Owned by the City of Rainbow City

Rainbow City Park (PPIN 047845)
3525 Park Lane
Walking Track, WT Vinyard Building, Pavilions, playground, picnic tables, tennis courts, pickleball courts

Rainbow City Community Center/Library (PPIN 048408)
3702 Rainbow Drive
4.00 acres

Rainbow City Municipal Building (PPIN 048409)
3700 Rainbow Drive
City Hall, Fire Dept., Police Dept.

7.3 acres behind the Rainbow City Recreation Center (PPIN 057152)
4412 Rainbow Drive
Ballfields

Rainbow City Recreation Center (PPIN 057155)
4412 Rainbow Drive
5.00 acres
Recreation Center, tennis courts, ballfields

Rainbow City Annex Building (Etowah County Historical Society
4412A Rainbow Drive

4414 Rainbow Drive (PPIN 057159)
.54 acres adjacent to the tennis courts at the Recreation Center
1.45 acres behind the .54 acres (PPIN 057160)

Vivian Lee Maddox Sports Complex
4573 Rainbow Drive
19.00 acres – soccer fields, ballfields, batting cage (PPIN 057186)
19.00 acres – baseball complex, concession stand, playground (PPIN 057187)
61.27 acres – disc golf, walking track, nature trail (PPIN 055455)
62.00 acres – (PPIN 055456) with lake
41.00 acres – (PPIN 095224) to the left of concession stand
43.00 acres - (PPIN 055430)

.74 acres Creekside Estates in Ball Play (PPIN 022565) (acquired through mitigation)
1.59 acres Creekside Estates in Ball Play (PPIN 074586)

4.19 acres Creekside Estates in Ball Play (PPIN 074589)
15.10 acres Creekside Estates in Ball Play (PPIN 074588)

Helipad (PPIN 064909)
1822 Pineview Circle
21.00 acres
Double wide trailer, helicopter pad operated by Survival Flight

2010 Broadway Street – Residential lot only (PPIN 039477)
Gadsden
Acquired through a drug conviction

Rainbow City Animal Shelter (PPIN 094053)
4450 Steele Station Road
Quasi hut
7.9 acres

40.00 acres (PPIN 048339) behind City Shop
41.00 acres (PPIN 055431) behind City Shop

Lindsey Property – Purchased 2/27/18
412 West Grand Ave. (PPIN 047740)
30.00 acres (PPIN 074751)
6.00 acres (PPIN 047836)
13.00 acres (PPIN 047837)
4.71 acres (PPIN 047838)
510 West Grand Ave. (PPIN 047748)
27.00 acres (PPIN 10448)

Etowah County Mega Sports Complex
5000 Lindsey Street
40.00 acres (PPIN 055374)
19.80 acres (PPIN 048052)
41.00 acres (PPIN 048054)
37.30 acres (PPIN 055432)
1.00 acre (PPIN 74513)

City Shop
318 Kinzie Lane (PPIN 106248)
15.00 acres (PPIN 055447)
(PPIN 055449) 9/12/22
Shop, recycling center, fencing, gravel parking

Lots 14 & 15 of Briarcliff Village (near Horseshoe Bend)
Lister Ferry Road
(PPIN 058172)
Donated to RBC by Allegheny Land Development

Fire Station II (PPIN 058522)
1400 Riddles Bend Road
2.01 acres
Fire Station, parking

.70 acres Lumley Road (PPIN 055406)
Near Universal Tool

8 acres – 238 Lumley Road (PPIN 48342 & 104009) DeVine Property
Purchased 10/13/21

Rainbow Landing (PPIN 049073)
100 Lakeshore Drive
Boat ramp, parking, restrooms, picnic pavilions, fishing pier

Lindsey Street (PPIN 073016)
10.00 acres
Purchased 3/31/21

74 acres – Martin Road
Purchased 4/15/22
PPIN 055240 055246 055239

56 Horizon Place (PPIN 041037)
(Quiet Action Title)
November 2022

Chert Pit – St. Clair County (PPIN 064079)
40 acres
Purchased 5/9/08

8.15 acres – St. Clair County (PPIN 3772)-next to Chert Pit
1.24 acres – St. Clair County (PPIN 3773)-next to Chert Pit

**Industrial Parks:**
Deerfoot Industrial Park
Steele Station Road
55.56 acres

Rainbow Industrial Park
Highway 77
48 acres

Lumley Road Industrial Park
165.00 acres (PPIN 055375)
47.12 acres (PPIN 055410)

Airport Road
50.00 acres (PPIN 055258)
Purchased 3/1/23

Rainbow Drive
5.03 acres (PPIN 57193)
Purchased 3/22/24

4017 Rainbow Drive (formally City Church)
(PPIN 48304)
Purchased 3/24/24

**Possible Annexations:**
NEAR Mega Site
Little Canoe Creek
1765 Canoe Creek Road North
1,100 acres
Zoned: Industrial

## RAINBOW CITY VEHICLE MAINTENANCE/INSPECTION PROCEDURES

Vehicle and equipment maintenance activities can pose a significant threat to storm water. The USEPA considers automotive maintenance facilities to be potential sources of petroleum, trace metals, antifreeze, and sediments that can contaminate stormwater runoff (USEP ,2004). Many petroleum products and chemicals are handled, stored; and disposed of on a regular basis during vehicle maintenance. Proper handling, storage, and disposal are critical to preventing contact with storm water. Exterior storage of supplies, spare parts, vehicles, and equipment can be a source of storm water pollution. Generally, good housekeeping and proper management of wastes can have a significant impact on stormwater runoff quality.

In order to minimize the negative effects of routine municipal operations on storm water and the surrounding receiving streams, the following minimum procedures are recommended for each department in order for the City to comply with our NPDES permit issued by ADEM:

1. Inspect all equipment and vehicles for leaks at least once per month and repair all leaks immediately.
2. Perform maintenance activities indoors when possible.
3. Keep spill/clean-up absorbent materials on-site and easy to access.
4. Dispose of waste materials (antifreeze, solvents, batteries, fuels, lubricants, etc.) or parts properly.

## RAINBOW CITY VEHICLE WASHING PROCEDURES

Municipal vehicles including emergency vehicles, roadway maintenance vehicle, and all other administrative support vehicles typically have sediments, oil, or other particles on them that end up in streams when they are washed. Soap, detergents, and vehicle/equipment cleaners are often used in the washing process. These pollutants, especially detergents, can have harmful effects on streams. For these reasons, our stormwater management plan approved by ADE requires us to protect the stormwater by washing vehicles in the appropriate location.

The ideal location for washing vehicles is at a designated indoor or covered location with drains designed t filter the runoff prior to discharging into the sanitary sewer system. Currently, only the fire department has a designated indoor area with floor drains; however, the drains currently do not discharge to the sanitary sewer system. The drain system in the fire bays will be investigate to determine if filters can be installed within the inlet or if the outfall locations can be retrofitted or will use the outdoor wash areas. All other municipal vehicles should be washed on grass/pervious sur aces. All departments must use a soap that does not contain any phosphates. All municipal vehicles should be washed at least once per month to minimize the pollutants on each vehicle that will generally get washed off during a rain event and enter a receiving stream.
